Mr. C. M. House-PERSONAL

Referring to your mimeographed letter of February 17 th, to Mr. Moses and others with a copie to various foremen referring to the Occupational Disease Act, State of Illinois with attached sheets containing recommendations covering rules and instructions for prevention of silicosis and asbestosis.

On the sheet referring to the Prevention of silicosis Item #2 states "air furnished for these masks must be clean and dry". A serious question arises in my mind as to whether our sand-blast masks deliver air which is satisfactorily free from sand and dust. I think the committee should advise us just what type of sand-blast mask is considered suitable and perhaps we in addition should make checks to determine if the type mask being used here is entirely effective as outlined in the recommendations covering the rules and instructions for the prevention of silicosis. //

This for your consideration.

S:C

Yours truly,

R. W. Seniff
