REDACTED

Dear Ms. DeVaughn:

In accordance with your wishes I examined the above named patient in my office on June 25, 1987. I also performed two x-ray of the chest, an electrocardiogram, laboratory studies, computerized vital capacity studies, and I am submitting the following report and opinion to you:

HISTORY:

The patient states he has worked for the above respondent for thirty-eight and one-half years as a hi-lo operator. He is exposed to dust and fumes, which irritated the chest. The patient has an occasional cough but has lost no time from work nor had medical treatment for any pulmonary condition.

The patient is presently working on the same job. His chief complaints at this time are:

- (1) Occasional cough
- (2) Pains in the low back.

PAST HISTORY:

Born and raised in the United States; married; three adult children; compensation for injuries to the low back, a right toe, right elbow and right shoulder; gastrectomy (twice) about eight years ago; does not smoke; drinks beer moderately; takes Tagamet and Iron Tabs.

SYSTEMIC REVIEW:

Gastro-intestinal:	Appetite is good; no nausea or vomiting; bowels regular.
Respiratory:	See chief complaints; no shortness of breath; uses no pillow.
Cardio-vascular:	No pre-cordial pain; no edema.
Genito-urinary:	No frequency, nocturia or dysuria.
Muscular skeletal:	Maintains a constant weight.
Nervous system:	Not nervous; sleeps well.

Re: _____

-2-

PHYSICAL EXAMINATION:

The patient is a fifty-eight year-old male, well developed and nourished, not appearing acute or chronically ill; comfortable at rest with no dyspnea or cyanosis.

Height:	5 feet; 10 inches.
Weight:	188 lbs.
Head:	Scalp free and clear.
Eyes:	Sclerosis of the retinal arterioles
Nose:	Septum in the midline; no obstruction.
Ears:	Drums visualized and are normal.
Mouth:	Pharynx negative.
Neck:	Supple; no adenopathy. Thyroid not enlarged.
Chest:	Symmetrical; expansion is equal. Percussion note and breath sounds are equal throughout. No rales; no rhonchi.
Cardio-vascular:	Blood pressure 140/76 P.M.I. diffuse; regular sinus rhythm. No thrills or murmurs. A2 is greater than P2
Abdomen:	Soft. Liver, spleen and kidneys not felt. No hernia; no masses.
Extremities:	No edema.

LABORATORY STUDIES:

Hemoglobin: 13.9 grams or 89%.

VITAL CAPACITY STUDIES:

See enclosed computerized vital capacity study.

ELECTROCARDIOGRAM:

1. Regular sinus rhythm
2. Normal ECG.

X RAY OF THE CHEST: (Taken on inspiration and expiration)

The bony cage appears normal. The costo-phrenic sinuses are free and clear. The broncho-vascular markings are increased at both bases. The diaphragms are round with no evidence of pulmonary emphysema. The cardiac silhouette appears normal.

DISCUSSION:

At the time of this examination, this fifty-eight year-old patient shows evidence of bronchitis. Two X-rays of the chest, taken on inspiration and expiration reveal that the diaphragms are rounded with no evidence of emphysema. A computerized vital capacity study was performed and shows only a slight abnormality due to the bronchitis. Regardless of cause, I would estimate a disability of five (5%) percent of total for the bronchitis.

Thank you for allowing me to examine this patient.

Very truly yours,

JSY:jm
