Gentlemen:

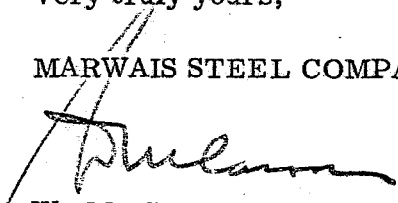

My neighbor, Dr. A. J. Beland, commented in a recent discussion that some people in your research group had done some work on the effect of solvents and similar volatile materials on the human system. Our interest in this subject is occasioned by the fact that we operate an elaborate coil coating line (painting system) in our Richmond, California plant and have recently had some cause to become concerned about the possible effect of paint fumes on employees whose work stations are considerably fume laden.

Perhaps you could furnish some information or advise of references where data concerning the effect of such materials on the human body may be available. Both technical and lay type information would be desirable.

We would appreciate and want to thank you in advance for your assistance with our request.

Very truly yours,

MARWAIS STEEL COMPANY

W. M. Carson
