Mr. O. J. Fly, Jr.

BESTWALL LIGHT ACOUSTICAL PLASTER

of April 23, 1958

A. H. Ten Elshof - vms

cc: Mr. J. R. Watt - Paoli
 Mr. E. B. Hollingsworth - Paoli

Using Mr. Shuttleworth's formula of February 19 and following Mr. Watt's suggestion that each plant stock enough raw materials to make 20 tons of Acoustical Plaster we would require the followings:

6,000 lbs. Bentonite Clay
 11,440 lbs. Asbestos
 60 lbs. Tetra Sodium Pyre Phosphate
 100 lbs. Ultraset D.S.
 1,000 B-32 Bags

With this information we thought you could probably develop what would be the most economical orders for our plant, bearing in mind that Mr. Watt states the Bentonite Clay is a perishable item. You may wish to transfer some of these items and others you may wish to order in larger quantities.
