Subject: Environmental Sampling effort meetings and pathforward...

Mark and Carl,

Do we have enough data from the physical / chemical properties that Steve Constable sent for the compound of interest to start running Toxchem to see what potential emissions are? I know that we need the experimental data on sorption coefficients, however, can we do a sensitivity analyses on the unknown properties with the data above? When can we get the analyses and emissions data back by?

Rick,

We still need the mass balance data for estimated influent loads so that we can run ToxChem. Can you send that (or at least the best guess) to us?

Irene
