to	Mr. K. W. Brown	location	Acme
from	G. W. Green	location	Tigard
subject	Asbestos Dust Survey	date	April 22, 1976

On January 21, 1976 the Acme, Texas Joint Cement Plant was monitored for airborne asbestos dust by George Fowler.

The counting was done at Tigard by Dawn Steyaert under my supervision. All persons were well under the current limit of five fibers per millileter, and also well below the limit of two fibers which is now to become effective in January, 1977. The overall plant average is 0.63 fibers, which compares to 1.04 on the June, 1975 count.

A summary of the data is attached.
