exposure was less than 10 weeks, you wouldn't be comfortable attributing that as a cause of mesothelioma.

MR. IGNATOWSKI: Objection.

THE COURT: Overruled.

A Well, I think each case has to be considered individually.

If there is a very intense exposure for a shorter period of time, and good documentation, for example, there are asbestos bodies found in the lungs, asbestos fibers found in the lungs, a shorter exposure, I would feel very comfortable in saying that shorter exposure caused a cancer or a mesothelioma.

Certainly a period of 10 weeks, I feel -- or beyond, I feel very comfortable, and I think less than 10 weeks, I don't always feel comfortable. I think it depends on the individual situation.

Q I take it that you don't know Dr. Myer Heyman that Mr. McGowan asked you about?

A No, sir, I don't.

Q It is just from the medical records?
