TEXACO USA
SAF-TI-PUGET SOUND PLANT

Mr. F. J. Beall
Houston, TX 77052

Please refer to your subject letter of January 9, 1981. The "Recommendation" section of the Industrial Hygiene Survey Report reflecting program improvement needs is an undertaking that appears will require additional manpower to successfully and totally implement. It seems that a person with extensive background in Industrial Hygiene would be most beneficial.

Action plans as to "Recommendations" are as follows:

1. Respiratory Protection Program - All recommendations are being investigated and necessary action taken to insure that a satisfactory program is maintained.
2. Sampling Plan - Propose to implement the proposed sampling plan as time and manpower is available.
3. Supervisory Training - Request has been submitted for training in June or July.
4. Asbestos Medicals - Being reviewed.
5. Exhaust Ventilation Systems - Laboratory checked on annual basis. Other systems within the plant will be reviewed.
6. Audiometric Programs - Item being reviewed.
7. Eye Wash and Safety Showers - Equipment checked once a day by Operators and work orders issued if necessary.
8. Inorganic Lead Standard - Being reviewed.
9. Texaco Additive Handling Precautions Manuals - Manuals have been distributed to all departments with data sheets pertinent to that department.

The survey was thorough and well conducted and the report appears to be concise and well edited.

We have no further comments as to improvement of future surveys and report format.
