EPA GPS ID: SX8123 Well Status (see table): AC If not Active, Reported Date Last Active:															
Nature of Injected Fluid(s) if any: Produced fluids															
General Condition of the Well Site: NA															
Notes & Comments (include discrepancies from database values): Tubing gauge reads: 425 psi, Annulus gauge reads: 425 psi															
Perforations provided by field hand on-site: Team's observations:															
3,247' to 3,265' Well, City of Laurel 6-3 #3 was injecting at 425 PSI and we noticed that the															
3,315' to 3,325' Annulus was also at 425 PSI (which could show a Mechanical Failure), so															
3,368' to 3,400' we asked if the Annulus could be bleed off, to watch for a pressurization															
3,523' to 3,536' of the Annulus. The Annulus did not pressurize in the time we were at that location.															
See reverse for additional observations, comments and photo log

Field Measurements and Observations (Cont.)

(Cont.) City of Laurel (COL) 6-3 #3

Team's comments on Petro Harvester's on-site operations:

We Inspected 8 wells that day, with a total of 9 people. 4 from Petro Harvester, 2 from MSOGB and 3 EPA.

All inspected wells were located in areas that were fenced and gated. All the Pumping Units and Injection Pumps were of high quality and operated almost silently. Locations seemed to be kept clean and organized.

(TA status: inactive 2 years or more. IN status: inactive less than 2 years. PBTD: Plug back total depth - not total well depth)
