

Rugged, Compact Design JERGUSON GAGES For Efficient, High Pressure Steam Service

JERGUSON High Pressure Steam
Gages are ruggedly built, and have the compact design that means more efficient steam power plant service.

The Jerguson Model 618 HP Gage illustrated, for example, is designed for 600 pounds W.S.P. and has 18" of easy-to-read visibility. It is compactly built and requires less space, yet it has unusual strength. Both chamber and cover are rugged forged steel. A coil at the end takes care of expansion and contraction encountered in high temperature work. Valves are modern flange design, with outside screw and yoke.

For gages that do a better job in the power plant . . . while requiring a minimum of space . . . use Jerguson High Pressure Steam Gages. Available for all pressure requirements.

Jerguson offers a complete line, including inclined gages and distance reading gages, for power plant use.

This Jerguson Model 618 HP meets existing Navy requirements for boiler steam service, and is now in use on stores of U. S. battleships and destroyers.

METERS AND INSTRUMENTS, MECHANICAL

35 GAS ANALYZER—Burrell Technical Supply Co., 1911 Fifth Ave., Pittsburgh 19, Pa. 4-page bulletin No. 212 discusses applications of Burrell Industrial gas analyzers.

36 TIN CONTENT INDICATOR—Whetco Instruments Co., 411 W. Harrison St., Chicago 7, Ill. Bulletin No. D700-1 contains specifications, operation and price information on Whetco Model 3110 tin content indicator. Educational bulletin No. 2 provides a technical explanation of method of determining tin content of a solder batch.

37 TORQUEMETERS—Testing Equipment Dept., Baldwin Locomotive Works, Philadelphia 48, Pa. 4-page bulletin No. 216 tells how to specify torque-meter requirements and shows how the torquemeter works.

38 CO₂ INDICATOR—Burrell Technical Supply Co., 1911 Fifth Ave., Pittsburgh 19, Pa. 4-page bulletin No. 209 describes construction and operation of the Burrell CO₂ indicator.

39 MEASURING AND CONTROLLING INSTRUMENTS—Brooks Instrument Co., Wayne and Roberts Ave., Philadelphia 44, Pa. 48-page catalog No. 7301, entitled "Instrumentation for Treatment of Sewage and Industrial Wastes," presents applications and instruments.

PIPING, FITTINGS, VALVES AND SPECIALTIES

40 INTERCHANGEABLE VALVES—Lunkensheimer Co., Cincinnati 14, Ohio. 12-page folder No. 177 introduces the Lunkensheimer Renewo valve three-way valve.

41 FLEXIBLE METAL TUBING—Pennsylvania Flexible Metallic Tubing Co., 72nd St. and Powers Lane, Philadelphia 43, Pa. Bulletin No. 44-3 describes Pentflex flexible metallic interlocked galvanized steel hose and bronze steam hose. 4-page folder describes application of flexible tubing for air, steam, gases and volatiles.

42 WELDING BRANCH PIPE OUTLET—Bonney Forge & Tool Works, Allentown, Pa. 4-page catalog No. 100 describes Bonney WeldOlets for Branch Pipe Outlets, presents complete information on how WeldOlet fittings reduce piping costs.

43 WELDING HOSE—Hewitt Robber Div., Hewitt-Robins Inc., Buffalo 1, N. Y. Pamphlet explains ease of handling, the greater safety and faster operation achieved with Twin-Weld hose.

PUMPS

44 CENTRIFUGAL PUMPS—Durlin Co., Dayton 1, Ohio. 10-page bulletin No. 415 on Model 10 Series M centrifugal pumps includes their newest design features and complete exploded views of all parts.

45 PUMP LINE—Economy Pump, Inc., Hamilton, Ohio. 4-page catalog No. B344 discusses construction details of vertically split, cast high-pressure pumps. 8-page catalog No. P-447 covers applications of horizontal non-clog sewage pumps.

46 OIL-OPERATED PUMPS—American Engrs. Co., Philadelphia 19, Pa. 10-page catalog No. 100 presents Hale-Shaw variable-discharge, oil-operated pumps and controls, both high and low pressure.

47 INDUSTRIAL PUMPS—Roth D. Roth Co., Rock Island 11, Ill. 18-page bulletin No. 101 describes Roth heavy-duty flexible-coupled pumps, special metal pumps and series of industrial pumps. 4-page bulletin No. 103 discusses the new Monobilt pump, where pump and motor are combined into one compact unit.

48 TURBINE PUMP—Pearless Pump Div., Food Machinery and Chemical Corp., 301 West Ave. 18, Los Angeles 12, Calif. Bulletin No. B-100 covers Champion Pearless deep well turbine pumps.

49 CHEMICAL PUMP—Milton Roy Co., 1780 E. Marmad Rd., Philadelphia 48, Pa. 4-page bulletin 10 discusses the Atometric, a controlled-volume chemical pump with rotary air or gas motor drive.

Better Coal Preparation for Greater Combustion Efficiency

WITH

AMERICAN SHREDDER RING CRUSHERS

RAGGED FIRE BED
= **EXCESSIVE CO₂**
ASH PIT LOSS

EVEN FIRE BED
= **UNIFORM COMBUSTION**

Every pound of coal means *more* BTU's—more efficient heat, when Americans do the preparation job! ROM coal is reduced rapidly with exacting control of fines, uniform sizing and no oversize—at a cost of less than 1¢ a ton. The result: Americans pave the way for a loose, uniform firebed quickly responsive to sudden steam demands—without excessive ashpit drop or unnecessary CO₂.

Shredder
Ring

Patented manganese steel shredder rings, exclusive with American Rolling Ring Crushers, split the coal by impact rather than by crushing. Shown below is the rotor assembly, with its many rows of shredder rings. Each ring has twenty cutting edges—and revolves on individual shaft, free to deflect from tramp iron without damage.

Rotor
Assembly

American Type "S" Rolling Ring Crusher, with heavy cast steel housing and sectional construction, secured at dust-tight machined joints with coupling bolts for easy access to crushing chamber.

Write for details on efficiency of coal preparation in power plants with American Crushers.
