Dear Dick:

Please find attached my copy of Federal Actions Bulletin
No. 9 which discusses the asbestos question in detail.

It prompts some questions on my part which as you know have
been on my mind for some time.

1. How long would it take Maremont to develop a
pre-arc'd shoe for installation in our shops?
2. Could we use our current O.T.C. shoe utilizing
the A.I.O. concept for the purpose of installation
in our shops?
3. Is it possible that someone is working on a non-
asbestos material for brakes? Is Maremont?
4. What is Maremont's opinion on the industry
abandoning point of sale grinding?
5. Which of the following competitors do arc grinding
in their shops as Sears does?

Wards
Penneys
K-Mart
Goodyear

Western Auto
Grand Auto
Pep Boys
Firestone

I would appreciate answers to the questions I've posed as soon as possible. In addition, I look forward to an early reply on the pros and cons of pre-arc'd shoes I asked for from Bob Rogers and Frank Skelton at our production meeting.

Thanks for your help.

Best regards,

SEARS, ROEBUCK AND CO.
