ALLPAX

the
UNIVERSAL
PACKING

STOPS LEAKS
PREVENTS SCORING
LONG-LIVED

ALLPAX... the packing that packs all... eliminates packing waste and saves time and labor in packing. When worn so that the gland is taken up entirely, it is not necessary to replace with new packing... simply back off the gland and add a sufficient amount to fill the stuffing box. This feature of ALLPAX means economy in the use of ALLPAX as there is no waste, all of the packing being effective. Furthermore, the re-packing job is faster and easier.

ALLPAX maintains its resiliency over long periods of service, conditions itself to a glossy, non-scratching surface and is guaranteed not to score the shaft.

All the advantages are in a packing that is recommended for hot or cold liquids or gases, and is available for all sizes and shapes of stuffing boxes. Try ALLPAX and see for yourself.

Your distributor can supply you.

APPOINTMENTS

Tinken Roller Bearing Co. has announced five bearing div. organizational changes: (1) Blair Glenn has been promoted to assistant factory manager of Canton bearing div. (2) Henry Tobey has been made general superintendent of Canton bearing factory, succeeding Glenn. (3) Fred Barnard has been appointed Canton bearing factory metallurgist, succeeding Tobey. (4) Joseph Selby has become assistant Canton bearing factory metallurgist, succeeding Barnard. (5) Russell P. Fowler has been made superintendent of Bucyrus bearing factory, where operations are scheduled to begin early this spring. William A. Fowler, general manager of Columbus plant, retired Jan. 31 after 38 years with the company. L. D. Cable became general manager. Pardee H. Frank, service manager, retired Feb. 1 after 27 years of service. Elmer Anderson succeeds him as service manager.

Bernard Lester, assistant manager, headquarters, industrial sales dept., Westinghouse Electric Corp., has retired.

Allis-Chalmers Mfg. Co. has named E. H. Horstman, chief engineer and Hans P. Dahlstrand, director of engineering of steam turbine dept. Horstman assumes complete charge of steam-turbine engineering. George H. Carden has been made manager of Allis-Chalmers Baltimore district office and T. C. Smith has been named resident representative at Beaumont, Texas. A. F. Rolf, an assistant secretary of Allis-Chalmers for more than 25 years and associated with the firm's New York district office for nearly 45 years, has retired. L. E. Bogen and Nathan Wilkinson, two veterans with over 40 years of service, have retired. James M. White, vice president in charge of manufacturing at Allis-Chalmers, Milwaukee, Wis., has announced his resignation effective Jan. 17, but will remain in an advisory capacity to President Walter Geist for next six months.

Four major appointments in control divisions of General Electric Co.'s apparatus dept. have been announced: M. H. Blech has been named manager of manufacturing. C. B. Bradish, manager of engineering, and E. A. Green, manager of sales. Thomas I. Hago has been made accountant for the control divisions. J. L. Kerr and L. E. Newman have been appointed manager and assistant manager, respectively, of turbine sales div. at River Works, Lynn, Mass. K. M. Holt and W. W. Kurper have become divisions engineer and assistant divisions engineer in turbine, generator and gear engineering divisions at Lynn. E. N. Twogood has been appointed a divisions engineer in gear engineering div. L. P. Schildneck is generator engineering div. A. D. Somers is turbine engineering div. and S. N. Hadman is auxiliary turbine engineering div. (Flushing, Mass., plant).

General Electric Co. announces organization of six divisions in small and medium motor divisions—administrative, general sales, product sales, product engineering, product manufacturing and accounting. Eleven men are involved in organization of (Continued on page 182)

Here's a lot of... PUMP in a small space

THESE IMPORTANT

"CLOSE-CUPLD"

FEATURES MEAN BETTER OPERATION

1. Shaft sleeve covers full length of shaft... compression seals between shaft sleeve and impeller hub and sleeve and shoulder on shaft completely protect shaft from liquid damage. Unlike most pumps, shaft sleeve is free to expand or contract with temperature changes—prevents buckling and distortion.

2. Machined stuffing box designed for die-formed, semi-metallic packing or mechanical seal without necessity of making machining changes... gives you operating flexibility.

3. Liquid deflector, mounted on end of shaft sleeve prevents leakage of liquid into motor bearing... is drilled and tapped so that it can be used to prevent shaft rotation while removing or tightening impeller nut; also, to remove sleeve... saves time.

4. New split gland simplifies repacking of stuffing box, when necessary, another time saver.

Fig. 3650

Send for your copy of Bulletin 710.1 today. You will find the data complete enough to enable you to select the proper pump and motor... make layouts and check all materials of construction.

Fig. 2750

For heavy duty—general purpose pumping—
The Goulds "Support-Head" Centrifugal Pump

Standardization of parts... extra heavy construction... 23 sizes... capacities up to 3000 G.P.M. are some of the reasons why so many companies standardize on Goulds "Support-Head" Pumps. For the whole story send for Bulletin 715.1.
