Dear Director (Robert A. Kehoe)

I read in your
work in the Jan 63 issue of
Today's Health. I would

appre

concerning my

When our Dr. Lee

him last week he said may-

be he has some lea

to some lab to research center
on which the sy

exposure
didn't see & I still work

there after many years

My father was a painter
for

it out & left

7 yrs ago. I started losing

memory & then things

went for
upset mental condition

the average prisoners & that
what they thought he had
& steel ~~claws~~ had some
from somewhere & he doesn't
have a record as head of a
& a lot would likely come
from there so the thought
maybe the lead in the system
had originated as far as
broken tower cleared slot
in as well & he was worried
what the final effects of an
on lead poisoning were when
it was accumulated slowly on
long period & person doesn't
The carl walk cant stand him
we have I left him out of
bed in chair with the cat
we feed him.

any
than
other
people
(Gibson)
and
other

- 2 -

Sometimes words are
intelligible. Other times they
are not. However he can
because he
guesses are related to the
questions.

So, would you think lead
or arsenic poisoning could
be causing any of this?
And would the EDTA cure
any good for this or would
that only be used on short-
term exposure when it's
diagnosed right away.
The Dr. was interested in the
final effects of arsenic & or
lead poisoning when still living.
Is there any new cures.

Thank you.
(Miss) (Gertrude)

if you want to ask

Dr. anything - etc. Dr.

~~Souford~~ Fla. 217 Whitehair

Bl. & Deland, Fla.

gives you

had had you think

been giving you since

in carrying out of

and as the 3 DTA are

and for the 2000

that will be used on 2nd

term before we meet

big money being paid

the Dr. was interested in the

final effects of the drug

had been given in

for about
