

December 8, 1970

HENRY ADAMS, M.D.
P. O. BOX 936
STARKE, FLORIDA 39091

DU PONT 5-YEAR LEAD STUDY

Listed below are the lead levels in urine specimens collected
from James H. Dean during 1970:

Original sample 7/13/70 - .313 mg/lit.

Repeat sample 10/5/70 - .233 mg/lit.

Mr. Dean continues to run abnormally high lead levels as he
has in past years and, therefore, bears continued watching for
clinical evidence of lead poisoning.
