LABORATORY TESTS: WASSERMAN: SPUTUM: X-RAY:

LYMPHATIC SYSTEM:

SKIN (SCARS, TUMORS, DISEASE): MENSTRUAL HISTORY (IF INDICATED):

SUMMARY: This man was rejected on the condition of the eyes on Oct. 1st, 1935 and advised consulting a specialist. For some unknown reason he has been working, and it is my advice that he be dropped from the service immediately because of the seriousness of the eyes. Under no circumstances should he be allowed to drive a car belonging to the company. Examination Nov. 14th, 1935

DATING: 1A 1B 2 3 4

shows that the eye condition under expert treatment has not improved, but rather has become worse. The condition is in no way related to his occupation, but is probably of a systemic origin.

This man is under the care of a reliable physician, Dr. Harry Weed has made a thorough examination of the eyes and advises that lenses will in no way aid his vision, but gives a very grave prognosis. Atrophic condition of both optic nerves.

Dr. Thomas Walsh is making a complete study of the physical condition of this man, and a report will follow later.

W. B. Burlingham, M.D.
