

LEAD INDUSTRIES ASSOCIATION, INC.

892 MADISON AVENUE

NEW YORK 17, N. Y.

October 3, 1963

SUBJECT: TRANSFORMER NOISE
REDUCTION USING LEAD

To Members of the Lead Industries Association, Inc.:

On April 2, 1963 we wrote you on this same subject, enclosing a copy of a paper presented before The Institute of Electrical and Electronics Engineers describing the use of steel, sheet lead and fibre glass to construct noise-reducing housings for transformers.

Subsequently we ran an ad on this subject in the July 29, 1963 issue of "Electrical World" which will appear again in the October 7, 1963 issue of the same magazine. We also published a story in Vol. 27/No. 2 of our Lead Magazine describing the installation in detail. A somewhat modified version of the ad will also appear in Factory Magazine in November and December.

As a result of the article in "Lead" and the first appearance of the ad in "Electrical World," we have had a number of inquiries for more information on this subject which we are answering by sending copies of the original I.E.E.E. paper, which you have. We are also attempting to follow up some of the inquiries by personal calls, but because of our limited staff anywhere near complete coverage is impossible.

However, we are supplying you with the attached list of inquirers on this subject to date in the hope that member company salesman or engineers may be able to follow up as many of these as possible in their own sales territories. We plan to prepare similar lists of future inquiries on this subject and will circulate them to those members interested from time to time. Please let us know whether you would like to have these future lists, as we do not plan again to send them to the entire membership.

Very truly yours,

Executive Vice President

RLZ:mk
Enc.
