Dr. Robert Kohoe
Kettering Laboratory
University of Cincinnati
Cincinnati, Ohio

Dear Dr. Kohoe:

Several weeks ago I had occasion to use the Methylene Blue method on blood smears for lead poisoning. This had been given to me in the early fall by Dr. M. M. Shafer. I made up the stain at that time and had had no occasion to use it until this time. I had very poor results then, and made up a fresh supply. This worked beautifully. Does the stain deteriorate on standing?

I also wondered if you have any further reprints or information on this method. I shall greatly appreciate any information you can give me.

Sincerely yours,

Arlene Parks
