

NEED IS THE MOTHER OF ALL INVENTIONS

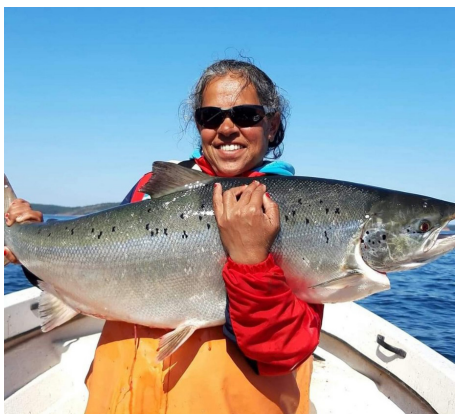

“Everything has a context, from the smallest environmental gesture to saving the stream and bottom sea for future generations.” That’s what Erik Moebius, one of the founders of the company [Hemomatik](#) and [Endlessgreen](#), thinks.

Quote I, as a retired 78-year-old working remotely, live by: “Think Global act Local”. You must be able to live where you stand. If you run away from reality, if you survive, you will come back to the same idea thinking that the planet is round and not as big as almost 8 billion people think. Other quotes are: “I prefer action before talking” and “time is more valuable than money”.

Hemomatik produces and sells transducers since 50 years ago and in the last two years, the company has started to produce transducers for the environment and sustainability.

When the pandemic came, I started working from home and formed [Endlessgreen](#) intending to reward and inspire young enthusiasts who think about the future and realize that inventions, art and music benefit animals, nature, water, and air. Endlessgreen only has members who work for the “Good against greedy and power-hungry” and some ignorant politicians. A neighbour of mine, the same age, has been doing research with his wife all his life. They have world patents in 27 countries but are more hindered than helped. That’s why I founded [Aquatrack](#) with him and younger enthusiasts and also started [Swedish-Water Foundation](#).

Another member, Sweden’s only female coastal fisherman in the Bothnian Sea, Manjula Gulliksson, noticed that the Baltic Herring ran out. I help her through her site [Balticfish](#). It is an uneven battle against the large fishing industry, which in Norway alone has a turnover of 1000 billion a year and buys fish that is vacuumed in the Bothnian Sea to feed farmed fish. Manjula’s company is called [Nordinsfisk](#).

Manjula, six years ago with a wild salmon that is fed on Baltic Herring. Today there is only 8% left.

Another project from the inventor Jan-Erik Nowacki, founder of [Nowab](#), who also is a member of Endlessgreen, is an underwater tube made of canvas that can potentially solve the drought in Gotland. The invention is still a vision as the municipality of Gotland has not yet responded for three years but instead prioritizes motorway planning which spans to the archipelago in Stockholm. However, we believe the future is to adapt to nature. How do we do this? By reducing and replacing trips with more remote work or by having walking distance to work. We must have plenty of natural areas that are still close to the big city. Energy can also be saved in both heating and cooling from the bedrock.

Since 50% of global electricity consumption goes to heating and cooling, several members of Endlessgreen have started the project “EndlessGreen balanced building energy”. It is a detached house that will function without connection to electricity and plumbing. A third member has created [Rädda Södertörn](#).

A fourth member, [Ecoloogroup](#) also thinks that it is wrong to flush faeces with

drinking water and has gained a lot of attention in developing countries that should not follow our bad example. [Hemomatik](#), in collaboration with Swedish expert companies, will come up with several environmental sensors connected to the cloud. For the air quality sensors, CO2 is usually found as standard as we must think locally and hope that Asia does the same instead of opening a new coal power plant every week. I know that anything is possible if you just think a little differently.

We have also received help from the arts. The artist [Helle Bang](#) and the sculpture: Art for the Environment for Endlessgreen by Helle Bang DK.

The sculpture “Broken rifle save the Planet” on the right shows a girl who has a broken rifle, takes a selfie with a polar bear cub, and sends it to her grandfather. Who is responsible for the planet? Do like the girl:

- Break the rifle.
- Get an unexpected friendship.
- Take a selfie.

It is now up to us to reduce CO2 so the girl can reach land before the ice block melts.

No animal lover starts a war. Another member of Endlessgreen: [Swedencrystal](#) has created the symbol for the Endless-Green prize. The prize will be awarded to those who help Animals-Nature-Water-Air and Sustainability.
