QUALITY CONTROL FOR JUNE 1982

The following is based on the Central Quality Control Monthly Summary for June 1982.

1. CONCLUSION

The percent filler range on glass mat shingles is too wide.

2. RECOMMENDATIONS

The percent filler range of glass shingles should be kept within the U/L minimum of 50% and our established maximum of 60%.

3. DISCUSSION

The percent filler range of 35.0% to 71.5% is much too great. Underwriters has set a 50% minimum on our glass shingles and our maximum is set at 60%.

Will Mr. Burris please comment on what action will be taken to correct the above.
