MEXICO/AROCLOR 1254

→ Dr. R. Pogue - B2SJ
Aroclors - Mexico

Cumming Paton
C3SF

As far as non-dielectric uses of Aroclor 1254, I believe that our schedule has remained unchanged. These products were taken off the market in the U. K. on April 1, 1971. We are still selling in world areas where competition is present and who are still marketing PCBs. At present, this is everywhere except the U. S., the U. K., and Canada. At the end of this year, it looks like the European suppliers will be removing their products from the market, and so at that time we will quit selling to Europe and probably also to Latin America and Africa. Australia appears to be somewhat of a different situation in that, while the Japanese have banned the sale of PCBs in Japan, they have not curtailed world-wide sales. Australia is one of their potential markets.

I hope this clarifies the situation for you.
