

longer life span

Metal surfaces that must resist outdoor exposure—weather, water, acids, alkalis and other corrosive influences—have a longer life span when they are regularly protected with maintenance paints formulated with Monsanto AROCLORS.

The AROCLORS (chlorinated biphenyl and chlorinated polyphenyls) are widely used by manufacturers of modified and synthetic rubber coatings and in lacquers, hot-melt strip coatings, maintenance paints, fire-resistant coatings, wood-sealer formulations and marine paints.

AROCLORS

Learn more about the protective qualities of the AROCLORS . . . Write MONSANTO CHEMICAL COMPANY, Phosphate Division, 1700 S. Second St., St. Louis 4, Mo.

AROCLOR: Reg. U. S. Pat. Off.
