

Response Opinion for PFAS Proposal

On behalf of Suzhou Taishang New Materials Co., Ltd., we would like to express our greetings to the five countries proposing the ECHA and PFAS management control protocol. Our company has always made unremitting efforts to comply with the domestic and international regulations. We support the ambitious attempts of EU to reduce the risks caused by toxic and harmful substances, and continue to take sincere practical measures to meet the requirements of EU chemical regulations including REACH.

Suzhou Taishang New Materials Co., Ltd. is committed to the development and application of special materials, and its products are applied in the fields of aerospace, automotive, medical, high-speed transmission, communication, photovoltaic and other cable industries, providing support for the localization of special fluorine containing insulation material used in crosslinkable ethylene tetrafluoroethylene copolymer-halogenated materials. The material has excellent mechanical properties, crack resistance, aging resistance, stable chemical properties, and can still operate stably at high temperatures of 200°C. It is one of the important wire types used in the aerospace cable field, which has long been monopolized by foreign countries. As the main raw material for the production of this material, ETFE has a necessary use and it can not be replaced by the substitutes existing in the market or mentioned in the draft completely. Therefore, we apply for an indefinite extension for this application.
