PRODUCT BULLETIN #GBB51575

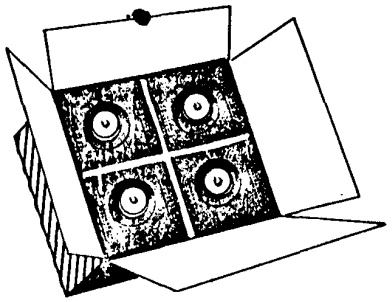

THE GEDCOR PCB BURN BOX

Many transformers and capacitors are filled with a nonflammable, dielectric insulation liquid, commonly known by the generic name of ASKAREL.

ASKAREL contains a high concentration of polychlorinated biphenyls, commonly called PCB's. Mounting evidence indicates that PCB's have adverse effects on the environment-in such small amounts as TEN PARTS PER TRILLION.

In order to maintain transformers and capacitors in good condition, it is necessary to test this dielectric insulation liquid periodically. Two problems surface:(1) How to dispose of this test and purge amount of environmentally damaging material safely; and (2) how to transport this material safely without the possible liabilities of accidents during shipment.

USE THE GEDCOR PCB BURN BOX-PART #GBB

COMPONENTS

QTY.	ITEM
1	Master Carton 14"x14"x8
4	"Boxed" One gallon, plastic jugs equipped with Dow Imbiber Bead
1	Product Bulletin

TO USE: Simply fill the individual jugs with the material to be disposed, place in the master box, and seal. Shake vigorously and allow to stand a short while to assure solidification of hazardous liquids. You should now have your problem in solid form and have eliminated the possible expensive liabilities of handling a liquid hazardous material.

GEDCOR CORPORATION can provide certified, incinerated disposal. If this service is desired, please order the item below.

Product Name: GEDCOR DISPOSAL LABEL
Standard Package Part #GDL-1
Standard Package: 1 Label
Standard Package Price: $13.75

GEDCOR Disposal Label, Part #GDL-1 is provided as proof of the purchase of prepaid disposal services. USE This Label, properly filled out by the shipper and attached to the outside of a package not exceeding 60 lbs. net weight, will assure the shipper proper disposal of the solidified contents of the package when shipped prepaid to Gedcor.
