Re: X-ray Survey Number: C-7751

Place: Posco, Inc.
20200 Sheldon

Dates: December 13, 1965

**PLAINTIFF'S
EXHIBIT**

FOS-701

Attention:

Gentlemen:

The results of the mass x-ray survey recently made of the members of your organization are as follows:

<u>Survey Film Impression</u>	<u>Number</u>	<u>Per Cent</u>
Total examinations	<u>209</u>	<u>100.0</u>
Condition of lungs satisfactory	<u>202</u>	<u>96.7</u>
Known cases of tuberculosis	<u> </u>	<u> </u>
Known suspected tuberculosis	<u> </u>	<u> </u>
New suspected tuberculosis	<u> </u>	<u> </u>
Non-tuberculous disease	<u>7</u>	<u>3.3</u>

There were 1 technically unsatisfactory films which are not included in the above figures.

The survey film is used merely as a screening device for the detection of significant abnormalities in the lungs. In order to confirm or deny the tentative diagnosis, it is necessary that all persons whose survey film indicates the presence of a significant abnormality, either tuberculous or non-tuberculous, have 14 x 17 diagnostic x-rays and other clinical studies as indicated.

All such persons have been notified of their conditions and asked to return to either their private physicians or one of the County Tuberculosis Clinics for further study.

I wish to thank you for your cooperation in this project and hope that it may become a routine part of your health program in the future.

Very truly yours,

J. B. Stocklen

J. B. Stocklen, M.D.
Controller of Tuberculosis
for Cuyahoga County.
