

1 Dreessen.

2 Q In the '50s, did the ACGIH also have TLVs?

3 A Yes. They republished their list every  
4 year, on an annual basis, and for some things they  
5 were changed, if it was more evident that the level  
6 they previously recommended was not safe.

7 The level for asbestos, however, remained at  
8 5 million particles per cubic foot from '46 to '68.

9 Q So the ACGIH, the jury has already heard,  
10 were made up of people who were government --

11 A They worked for either state government,  
12 federal government, territorial governments, both  
13 physicians and industrial hygienists.

14 Q They weren't associated with industry?

15 A No.

16 Q So did they have this information about Doll  
17 in 1955?

18 A Sure.

19 Q And, Doctor, we heard from Dr. Dement and he  
20 said that the TLVs weren't concerned with cancer; is  
21 that correct?
