

STUDIES FROM THE SARANAC LABORATORY

1835 - 1958

Volumes I. - VII.

SARANAC LABORATORY came into being in the fall of 1885.

"... I soon built a little addition off my office, and this became the laboratory in which I worked. . . the room opening from my little office, which was really the beginning of the Saranac Laboratory for the Study of Tuberculosis." An Autobiography, E. L. Trudeau, p. 187; Lea and Febiger, 1915.

"In the fall of 1885, as soon as I had equipped my little laboratory room, I began to work." *Idea*, p. 201.

First little laboratory burned in 1893.

Present Saranac Laboratory building erected in 1894.

Saranac Laboratory incorporated in 1900.

John Mack Wing: Library and Lecture room was completed in 1928; the second story was completed in 1935.

TRUDEAU FOUNDATION STUDIES

(INCLUDING SARUMAC LABORATORY STUDIES)

1917 - 1921 (Bound Volumes)

- 1917 -

TRUDEAU FOUNDATION STUDIES
(INCLUDING SAILLIAC LABORATORY STUDIES)

1917 - 1921 (Bound Volume)

- 1920 -

The Thirty-Sixth Annual Medical Report of the Trudeau Sanatorium and the Sixteenth Medical Supplement for the Year Ending October 31, 1920, together with the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

GARDNER, LEROY U. Studies on the Relation of Mineral Dusts to Tuberculosis. I. The Relatively Early Lesions in Experimental Pneumokoniosis Produced by Granite Inhalation and Their Influence on Pulmonary Tuberculosis. Am. Rev. Tuberc. 4:734-755, December 1920.

LONG, ESMOND R. (Fellow of the Trudeau Foundation). The Purine Bases of the Tubercle Bacillus. Am. Rev. Tuberc. 4:842-846, January 1921.

- 1921 -

The Thirty-Seventh Annual Medical Report of the Trudeau Sanatorium and the Seventeenth Medical Supplement for the Year Ending October 31, 1921, together with the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

BALDWIN, EDWARD R. and GARDNER, LEROY U. Reinfection in Tuberculosis: Experimental Arrested Tuberculosis and Subsequent Infections. Am. Rev. Tuberc. 5:429-517, August 1921.

TRUDEAU FOUNDATION STUDIES

(INCLUDING SANITARY LABORATORY STUDIES)

1922 - 1926 (Bound Volume)

- 1922 -

The Thirty-Eighth Annual Medical Report of the Trudeau Sanatorium and the Eighteenth Medical Supplement for the Year Ending October 31, 1922, together with the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

GARDNER, LEROY U. and EMORSE, MORRIS. Studies on the Relation of Mineral Dusts to Tuberculosis. II. The Relatively Early Lesions Produced by the Inhalation of Marble Dust and Their Influence on Pulmonary Tuberculosis. Am. Rev. Tuberc. 6: 702-727, November 1922.

GARDNER, LEROY U. Peeling by Resolution in Experimental Pulmonary Tuberculosis. Am. Rev. Tuberc. 6:163-182, May 1922.

- 1923 -

The Thirty-Ninth Annual Medical Report of the Trudeau Sanatorium and the Nineteenth Medical Supplement for the Year Ending October 31, 1923, together with the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

BAFENS, G. (Fellow of the Trudeau Foundation). Demineralization in Tuberculosis: Distribution of Calcium in the Tuberculous Guinea Pig. Am. Rev. Tuberc. 7:111-116, April 1923.

GARDNER, LEROY U. Studies on the Relation of Mineral Dusts to Tuberculosis. III. The Relatively Early Lesions in Experimental Pneumoconiosis Produced by Carborundum Inhalation and Their Influence on Pulmonary Tuberculosis. Am. Rev. Tuberc. 7:344-357, July 1923.

TRUDEAU FOUNDATION STUDIES

(INCLUDING SARANAC LABORATORY STUDIES)

1922 - 1925 (Bound Volumes)

- 1924 -

The Fortieth Annual Medical Report of the Trudeau Sanatorium and the Twentieth Medical Supplement for the Year Ending October 31, 1924, together with the Eighth Collection of the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

MAYER, EDGAR and DEORENI, MORRIS. Studies with Ultraviolet Light. I. The Effect of Quartz-Mercury-Vapor Irradiations (Alpine Quartz-Light) on Experimental Tuberculosis of the Cornea in Rabbits. *Am. Rev. Tuberc.* 10:146-155, October 1924.

MAYER, EDGAR and DEORENI, MORRIS. Studies with Ultraviolet Light. II. The Action of Quartz-Mercury-Vapor Irradiation on Inhalation Tuberculosis in Primarily Infected and Sensitized Guinea Pigs. *Am. Rev. Tuberc.* 10:157-165, October 1924.

MAYER, EDGAR and DEORENI, MORRIS. Studies with Ultraviolet Light. III. The Bactericidal Action of Mercury-Quartz-Vapor Light Irradiation. *Am. Rev. Tuberc.* 10:166-169, October 1924.

- 1925 -

The Forty-First Annual Medical Report of the Trudeau Sanatorium and the Twenty-First Medical Supplement for the Year Ending October 31, 1925, together with the Ninth Collection of the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

SARANAC, LINDA E. The Pathology of Artificial Pneumothorax in Experimental Tuberculosis. *Am. Rev. Tuberc.* 10:501-523, January 1926.

SCOTT, WILLIAM R. and DEORENI, MORRIS. Experimental Tuberculous Meningitis: Superinfection of the Meninges in Rabbits. *Am. Rev. Tuberc.* 11:200-216, May 1925.

- 1926 -

The Forty-Second Annual Medical Report of the Trudeau Sanatorium and the Twenty-Second Medical Supplement for the Year Ending September 30, 1926, together with the Tenth Collection of the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.
No Saranac Laboratory reprints in this issue.

TRUDEAU FOUNDATION STUDIES

(INCLUDING SARANAC LABORATORY STUDIES)

1927 - 1930 (Bound Volumes)

- 1927 -

The Forty-Third Annual Medical Report of the Trudeau Sanatorium and the Forty-Third Medical Supplement for the Year Ending September 30, 1927, together with the Tenth Collection of the Papers of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

SOPER, WILLIAM H., SANFSON, HOMER L. and HASKINS, CHARLES H.
Respiration Tuberculosis in Rabbits: An X-Ray Study of the Development of the Tuberculosis of Primary Infection and That of Superinfection. *Am. Rev. Tuberc.* 15:25-110, January 1927.

GARDNER, LEMUEL U. Preserving Supravital Staining with Neutral Red in Paraffin Sections of the Lung. *Proc. Soc. Exper. Biol. and Med.* 24:646-648, 1927.

GARDNER, LEMUEL U. and SMITH, DAVID T. The Origin of the Alveolar Macrophage Studied in Paraffin Sections of Lung Stained Supravitaly with Neutral Red. *Am. J. Path.* 3:441-450, September 1927.

BALDWIN, E. R., FERROFF, S. A., and GARDNER, LEMUEL U.
Tuberculosis, Bacteriology, Pathology, and Laboratory Diagnosis. Published by Lea and Febiger, 1927.

- 1928 -

The Forty-Fourth Annual Medical Report of the Trudeau Sanatorium and the Forty-Fourth Medical Supplement for the Year Ending September 30, 1928, together with the Eleventh Collection of the Papers of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.
See separate laboratory reprints in this issue.

* Separate publication; not included in the bound volume of TRUDEAU FOUNDATION STUDIES.

- 5 -

TRUDEAU FOUNDATION STUDIES
(INCLUDING SARANAC LABORATORY STUDIES)

1927 - 1930 (Bound Volume)

- 1929 -

The Forty-Fifth Annual Medical Report of the Trudeau Sanatorium and the Twenty-Fifth Medical Supplement for the Year Ending September 30, 1929, together with the Thirteenth Collection of the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

GARDNER, LEROY U. Studies on the Tissue Reactions to Primary Infection and Reinfection with the Tubercle Bacillus: I. A Histological Examination of the Omentum and Other Sub-peritoneal Tissues. *Am. Rev. Tuberc.* 20:201-213, August 1929.

CUMMINGS, DONALD E. Studies on Experimental Pneumokoniosis. IV. The Separation of Particulate Matter Smaller than Seven Sizer into Graded Fractions. *J. Indust. Hyg.* 11:245-256, September 1929.

GARDNER, LEROY U. Studies on Experimental Pneumokoniosis. V. The Reactivation of Healing Primary Tubercles in the Lung by the Inhalation of Quartz, Granite and Carborundum Dusts. *Am. Rev. Tuberc.* 20:833-875, December 1929.

- 1930 -

The Forty-Sixth Annual Medical Report of the Trudeau Sanatorium and the Twenty-Sixth Medical Supplement for the Year Ending September 30, 1930, together with the Fourteenth Collection of the Studies of the Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis.

SOPER, WILBUR E. and DUNNICK, MORRIS. Experimental Tuberculosis: Respiratory in Rabbits: II. The Protective Action of Inactivated and Living Tubercle Bacilli. *Am. Rev. Tuberc.* 21: 209-222, February 1930.

GARDNER, LEROY U. Differential Cell Counts of the Peritoneal Fluid from the Normal Guinea Pig. *Proc. Soc. for Exper. Biol. and Med.* 26:672-682, 1929.

GARDNER, LEROY U. The Cellular Reactions to Primary Infection and Reinfection with the Tubercle Bacillus: II. The Cells of Peritoneal Exudate Produced by the Local Injection of Tubercle Bacilli into Normal Sensitized Guinea Pigs. *Am. Rev. Tuberc.* 22:379-411, October 1930.

WATKINS, LEROY U. Pathological Anatomy of Intestinal Tuberculosis, Chap. VI, 83-112, *INTESTINAL TUBERCULOSIS*, Brown, Lawson and Sampson, Homer L. Published by Lea and Febiger, 1930.

*Separate publication; not included in the bound volume of TRUDEAU FOUNDATION STUDIES.

SARANAC LABORATORY STUDIES*

Reprints of Scientific Papers

1931 - 1936 (Bound Volume)

CONTENTS

- 1931 -

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. IX. 1932 - 1939

29. Studies on Experimental Pneumoconiosis: VIII. Inhalation of Quartz Dust. J. Indust. Hyg. 14:18-38, January 1932.
30. The History of the H1 Strain of Tubercle Bacillus. Am. Rev. Tuberc. 24:577-590, May 1932.
31. The H1 Strain of Tubercle Bacillus: A Record of Forty Years' Experience with an Attenuated Organism. Tubercle 13:504-519, August 1932.
32. Effects of Dusts upon the Respiratory System. Proceedings of Conference, Industrial Commission of Wisconsin, Chicago, Ill., November 16-17, 1932, published by Indust. Comm. of Wisconsin, pp. 8-50, 70-81, 105-124, 206, February 1933.
33. Silicosis: Analysis of Factors Involved in Its Production. Indust. Med. 2:37-52, July 1933.
34. The Pathologic Reaction in Various Pneumoconioses. J.A.M.A. 102:594-599, August 12, 1933.
35. Experimental Inhalation of Bituminous Coal Dust and Its Effects upon Primary Tuberculous Infection in Guinea Pigs, in collaboration with Donald E. Cummings and Gerald R. Dawl. J. Indust. Hyg. 25:476-485, November 1933.
36. Pathology of So-Called Acute Silicosis. Am. J. Public Health 23:1240-1249, December 1933. Read before the Industrial Hygiene Section of the American Public Health Association at the Sixty-Second Annual Meeting, Indianapolis, Ind., October 9, 1933.
37. The Reaction to Fine and Medium Sized Quartz and Aluminous Oxide Particles. Silicotic Cirrhosis of the Liver, in collaboration with Donald E. Cummings. Am. J. Path. 5, Supplement, Whole Number 54, 752-765, 1933.
38. Silicosis and Its Relationship to Tuberculosis. Am. Rev. Tuberc. 23:5-8, January 1934. Presented at a joint session of the Clinical and Pathological Sections at the Twenty-Ninth Annual Meeting, National Tuberculosis Association, Toronto, June 29, 1933.

39. The Pathology of Various Mineral Dust Diseases. Safety Eng. 63:109-112, March 1934. Presented before the American Institute of Mining and Metallurgical Engineers, New York City, February 19, 1934.
40. Tuberculin: Its Preparation and Use in the Treatment and Diagnosis of Tuberculosis, in collaboration with Edward R. Baldwin. U. S. Vet. Bur. Med. Bull. 10:265-273, April 1934.
41. Dust. Canadian Mining J. 55:370-371, August 1934.
42. Inhaled Silica and Its Effect on Normal and Tuberculous Lungs. J. A. M. A. 77:743-748, September 6, 1934. Read before the General Scientific Meeting at the Eighty-Fifth Annual Session of the A. M. A., Cleveland, June 11, 1934.
43. Pathology, Human and Experimental (Silicosis). First Saranac Symposium on Silicosis, Saranac Lake, N.Y., June 1934, pp. 22-50. Employers Mutuals, Wausau, Wisconsin, 1934.
44. The Experimental Production of Silicosis. Public Health Rep. 52:695-702, May 24, 1935.
45. Pneumoconiosis. Internat. Clin. 2, Series 45, pp. 15-53. J. D. Lippincott and Co., June 1935.
46. Pathology of Silicosis. Second Saranac Symposium on Silicosis, Saranac Lake, N.Y., June 1935, pp. 44-56. Employers Mutuals, Wausau, Wisconsin, 1935.
47. Correlation Between Pathological Anatomy and X-ray Appearance in Silicosis. Ibid - pp. 144-147.
48. Silicosis and Silico-Tuberculosis Complex: Response of Silico-Tuberculosis to Treatment - A Preliminary Report, in collaboration with Daniel H. Brunfield. Am. Rev. Tuberc. 22: 205-210, August 1935.
49. Roentgenological Appearance in Silicosis and the Underlying Pathological Lesions, in collaboration with R. E. Pancost, E. F. Pondergrass, A. R. Riddell, A. J. Lanza, Wm. J. McConnell, R. R. Savory, and R. L. Sampson. Report of a Committee, Public Health Rep. 52:929-936, August 2, 1935.

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. II. 1932 - 1939

50. The Diagnosis of Silicosis with Special Reference to Roentgenological Manifestations. *Ann. Int. Med.* 10:166-173, August 1936.
51. Pathology of the Pneumoconioses. *N. Y. State J. Med.* 36:1377-1381, October 1, 1936. Read at the Annual Meeting of the Medical Society of the State of New York, April 20, 1936.
52. The Similarity of the Lesions Produced by Silica and by the Tubercle Bacillus. *Am. J. Path.* 11:13-23, January 1937.
53. Silicosis and Related Conditions. The Gross Lectures, Phila., December 10, 1936. *J. Indust. Hyg. and Toxicol.* 18:111-125, March 1937.
54. Silicosis and Allied Disorders, in collaboration with the Medical Committee, A. J. Lanza, Chairman, S. R. Raythorn, T. Kyle Harlett, R. R. Jones, E. P. Fendergras, O. A. Sunder, and R. R. Sayre. *Med. Series, Bull. No. 1, Air Hygiene Foundation of America, Inc.*, 170 pages, April 1937.
55. Significance of the Silicotic Problem. Third Saranac Symposium on Silicosis, Saranac Lake, N. Y., June 1937, pp. 13-15. Employers Mutual Liability Insurance Co., Wausau, Wisconsin, 1937.
56. Pathology of the Pneumoconioses. *Idem* - pp. 70-102.
57. Correlation of Pathologic and Roentgenologic Findings. - *Idem* - pp. 103-117.
58. "Mixed" Dusts and "Protective" Dusts. Air Hygiene Foundation of America, Inc., Special Meeting of Workers, pp. 25-27, November 30, 1937.
59. Silico-Tuberculosis, in collaboration with D. H. Brunsfeld. *Am. Rev. Tuberc.* 35:757-762, December 1937.
60. Effects of Variations of Dust with Regard to Size, Concentration, and Composition. National Silicosis Conference, Report on Medical Control, Final Report of the Committee on the Prevention of Silicosis Through Medical Control, Washington, D. C. U. S. Dept. Labor Bull. No. 21, Part I, Section III, pp. 20-34, January 1, 1938.

• Separate publication

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. II. 1932 - 1939

61. Reaction of the Living Body to Different Types of Mineral Dusts With and Without Complicating Infection. Technical Publication 925, American Institution of Mining and Metallurgical Engineers, New York Meeting, February 1935. Mining Technol. 7, May 1935.
62. Etiology of Pneumoconiosis. J. A. M. A. 111:1925-1935, November 19, 1933.
63. Evidence of Inhibitory Action of Different Minerals upon Silica. Indust. Med. 2:735-741, December 1933. Presented before the New York State Society of Industrial Medicine, Albany, November 3, 1933.
64. Some Phases of the Pathology of Silicosis. Proceedings of the Constitutional Diseases Symposium, 1937, Northwestern University Medical School, Chicago, pp. 30-40, 1938.
65. Experimental Pneumoconioses. Chapter 3, pp. 257-345, Silicosis and Asbestosis, Edited by A. J. Langer, Oxford University Press, Inc., New York, 1938.
66. The Medical Control of Silicosis and Tuberculo-Silicosis. Surg., Gynec. and Obst. 63:579-582, February 15, 1936. Presented in the Symposium on Industrial Medicine and Traumatic Surgery before the Clinical Congress of the American College of Surgeons, New York, October 1935.
67. Pathological Anatomy (Pneumoconiosis). Fourth Saranac Symposium on Silicosis, Saranac Lake, N.Y., June 1935, pp. 35-46. Employers Mutual Liability Insurance Co., Wausau, Wisconsin, 1935.
68. Reaction to Inert Dusts. Idem - pp. 145-146.
69. Reactions to Mixed Dusts. Idem - pp. 147-152.
70. The Pathology of Bizarre Silicosis. Idem - pp. 218-219.
71. Rapidly Developing Silicosis. Idem - pp. 235-239.
72. Survey in Seventeen Cement Plants of Atmospheric Dusts and Their Effects upon the Lungs of Twenty-Two Hundred Employees, in collaboration with T. M. Durkan, D. M. Brunfiel, and H. L. Sampson. J. Indust. Hyg. and Toxicol. 21:279-318, September 1937.

Separate publication.

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. III. 1940 - 1946

73. Air Hygiene in the Mining Industry. Mining Congr. J. pp. 34-36, January 1940.
74. Recent Developments in Relation to Silicosis. Indust. Med. 9:45-46, February 1940. Read at the 1939 Conference of General Motors Physicians.
75. The Pathology and Roentgenographic Manifestations of Pneumoconiosis. J. A. M. A. 114:535-545, February 17, 1940.
76. The Knudsen Award. Indust. Med. 9:351-354, July 1940. Presented to Doctor Gardner before the Twenty-Fifth Annual Meeting of the American Association of Industrial Physicians and Surgeons, and the First Annual Meeting of the American Industrial Hygiene Association, New York, June 6, 1940.
77. Individual Susceptibility to Toxic Dusts. Proceedings of the Fifth Annual Meeting, Air Hygiene Foundation of America, Inc., pp. 26-35, November 1940. Additional remarks, pp. 40-41.
78. Practical Value and Application of Industrial Health Work from the Viewpoint of Research. Indust. Med. 9:625-626, December 1940.
79. Protective Action of Various Minerals Against Free Silica, in collaboration with T. H. Durkan. "Silicosis" - Proceedings of the International Conference, Geneva, 1938, I.L.O. Studies and Reports, Series F, (Industrial Hygiene) No. 17, pp. 108-123, I.L.O., Geneva, 1940. (Doctor Gardner's further contribution to this conference may be found on pages 8, 9, 15, 16, 19, 23, 27, 28, 30, 40, 53, 60, 61, and 89.)
80. Therapeutic Effect of Deleamycin Sulfamylazide on Tuberculosis in Guinea Pigs, in collaboration with A. J. Vorwald and A. E. Delchant. Kat. Tuberc. A. Tr. 35:79-81, 1940.
81. The Massive Conglomerate Lesions of Silicosis. Am. Clin. and Clinician. A. Tr. Fifty-Sixth Annual Meeting, Saranac Lake, N. Y., October 1938, 55:65-72, 1940.
82. Experimental Study of Inhibitory Effects of Aluminum Compounds in Silicosis, in collaboration with Morris Dvorski and A. E. Delchant. Bull. Am. Ceramic Soc. 20:263-284, August 1941. Presented at the Forty-Third Annual Meeting, American Ceramic Society, Baltimore, April 2, 1941.

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. III. 1940 - 1946

83. Tuberculosis in the Silicotic Subject. *Minnesota Medicine* 24:633-637, August 1941. Delivered before the Hennepin County Tuberculosis Association, Minneapolis, December 2, 1940.
84. Effects of Arc Welding Fumes on Susceptibility to Tuberculosis. *Proceedings of the Sixth Annual Meeting, Industrial Hygiene Foundation of America, Inc.*, p. 44, November 1941.
85. Tuberculosis in Industry. *Idem* - pp. 45-46.
86. Tuberculous Infection: Sources and Modes of Transmission. Fifth Saranac Symposium, Tuberculosis in Industry, Saranac Lake, N. Y., June 1941, pp. 5-6, Leroy U. Gardner, Editor. National Tuberculosis Association, New York, 1942.
87. Pathology of Pulmonary Tuberculosis. *Idem* - pp. 7-10.
88. Respiratory Irritants - Dusts, Fumes and Gases. *Idem* - pp. 115-122.
89. A Review of A Symposium on Tuberculosis in Industry held at the Saranac Laboratory, Saranac Lake, N. Y., June 1941. *J. A. M. A.* 118:642-644, February 21, 1942; Lecture on Industrial Medicine, Fourth Annual Meeting of the Congress on Industrial Health, Chicago, pp. 7-9, January 12, 1942.
90. Chrysotile Asbestos as an Indicator of Subtle Differences in Animal Tissues. *Am. Rev. Tuberc.* 45:762-766, June 1942.
91. The Significance of Chemical Examination in the Diagnosis of Silicosis, in collaboration with Andrew J. Redlin. *J. Indust. Hyg. and Toxicol.* 23:125-130, June 1942. Presented at April 1942 Meeting of American Industrial Hygiene Association.
92. The Pneumoconiosis. *Med. Clin. North America* 26:1235-1260, July 1942.
93. Effects of Daily Exposures to Arc Welding Fumes and Gases upon Normal and Tuberculous Animals, in collaboration with Douglas S. McGee. *J. Indust. Hyg. and Toxicol.* 24:173-182, September 1942.

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. III. 1940 - 1946

94. Vaccinating Properties of Avirulent Disociates of Five Different Strains of Tubercle Bacilli, in collaboration with M. Steenken, Jr. Yale J. Biol. and Med. 38:393-402, January 1943.
95. Action of Finely Divided Magnesium upon the Lungs, in collaboration with A. B. Delahant. Am. J. Public Health 33:153-155, February 1943. Presented before the Industrial Hygiene Section of the American Public Health Association, Seventy-First Annual Meeting, St. Louis, October 29, 1942, and also the Seventh Annual Meeting, Industrial Hygiene Foundation of America, Inc., pp. 87-88, November 1942.
96. Obituary for Donald Eddy Cummings. Annual Report of Saranac Laboratory of the Edward L. Trudeau Foundation, Saranac Lake, N. Y., 1942; Indust. Med. 12:490-491, July 1943.
97. Disability in Silicosis, in collaboration with George Wright. Proceedings, Eight Annual Meeting, Industrial Hygiene Foundation of America, Inc., pp. 47-50, November 1943.
98. The Relationship of Silicosis to Tuberculosis. Proceedings of Interstate Postgrad. Med. Assembly, North America, 1942, pp. 194-195, 1943.
99. Elements of Diagnosis and Prognosis in Pneumoconiosis. Rocky Mountain Med. J. 41:385-391, June 1944; Industry, Tuberculosis, Silicosis and Compensation - A Symposium, Chapter 7, pp. 71-84, by a Committee on Tuberculosis in Industry of the National Tuberculosis Association and the American Trudeau Society, Leroy U. Gardner, Editor. National Tuberculosis Association, New York, 1945.
100. Aluminum Therapy in Silicosis: An Experimental Study, in collaboration with Morris Doreck and Anthony B. Delahant. J. Indust. Hyg. and Toxicol. 26:211-223, September 1944; American Mutual War Seminar on Industrial Medicine and Surgery, 2, American Mutual Liability Insurance Co., Boston, June 1, 1945. Presented as the first Cummings Memorial Lecture at the Annual Meeting of the American Industrial Hygiene Association, St. Louis, May 9-10, 1944.

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. III. 1940 - 1946

101. Employability of Silicotic Subjects. Summary of Report of the Minnesota Survey, Thirtieth Biennial Report, Industrial Commission of Minnesota, Department of Labor and Industry, pp. 121-124, 1945-1946; Occup. Med., Leroy U. Gardner Material Number, 4:17-21, July 1947.
 102. Osteo-Sarcoma from Intravenous Beryllium Compounds in Rabbits, in collaboration with H. F. Healington. Abstracted, Federation Proc. S. Pt. II, 221, February 12, 1946; Federation of American Societies for Experimental Biology, Thirtieth Annual Meeting. Continuation of paper given, American Society for Experimental Pathology, Atlantic City, March 12, 1946.
 103. Report for Standard Cultures of Tubercle Bacilli. Report of the Committee on Standard Cultures of the Medical Research Committee of the National Tuberculosis Association, Leroy U. Gardner, Chairman, William H. Feldman, Max E. Lurie, H. I. Smith, William Steenken, Jr., William Charles White, and R. Stuart Willis. Am. Rev. Tuberc. 53:511-514, May 1946.
 104. H₃₇ Strain of Tubercle Bacillus: Its Disposition and Virulence of Variants in Normal and Silicotic Guinea Pigs, in collaboration with W. Steenken, Jr. J. Nat. Cancer Inst. 44:51-61, July 1946.
 105. History of H₃₇ Strain of Tubercle Bacillus, in collaboration with W. Steenken, Jr. J. Nat. Cancer Inst. 44:62-66, July 1946.
 106. Generalized Pulmonary Granulomatosis Occurring Among Workers Believed to Be Exposed to Beryllium or Its Compounds. Tr. Tenth Annual Meeting, Medical and Engineering Section, Industrial Hygiene Foundation of America, Inc., Pittsburgh, Bull. 6, pp. 89-94, November 7, 1946.
 107. Accurate Diagnosis of Silicosis - Possible Sources of Error. Tr. Tenth Annual Meeting, Medical and Engineering Section, Industrial Hygiene Foundation of America, Inc., November 1946. Transaction Series, Bull. 6, pp. 10-12, 1946.
 108. La Thérapie par l'Aluminium, in collaboration with G. W. Wright. Rev. Méd. de Liège 1:265-267, December 1946.
- Annual Reports of the Sarcoma Laboratory, 1921 to 1942, continued on next page.

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. III. Appendix

Report of the Saranac Laboratory by Leroy U. Gardner, Pathologist, appearing in the Annual Medical Report of Trudeau Sanatorium and the Studies of the Edward L. Trudeau Foundation, for the years ending:

October 31, 1921, pp. 11-13
October 31, 1922, pp. 32-41
October 31, 1923, pp. 14-26
October 31, 1924, pp. 41-43
October 31, 1925, pp. 45-47
September 30, 1926, pp. 46-48

Report of the Saranac Laboratory by Leroy U. Gardner, Pathologist and Director, appearing in the Annual Medical Report of Trudeau Sanatorium and the Studies of the Edward L. Trudeau Foundation, for the years ending:

September 30, 1927, pp. 51-52
September 30, 1928, pp. 46-48
September 30, 1929, pp. 61-64
September 30, 1930, pp. 49-51

From 1931 to 1942, inclusive, the Annual Report of the Saranac Laboratory was issued as a separate publication from that of the Trudeau Foundation.

Annual Reports of the Saranac Laboratory by Leroy U. Gardner, Pathologist and Director, for the years ending:

September 30, 1931, pp. 5-12
September 30, 1932, pp. 5-10
September 30, 1933, pp. 5-10
September 30, 1934, pp. 7-25
September 30, 1935, pp. 6-15
September 30, 1936, pp. 6-16
September 30, 1937, pp. 7-19
September 30, 1938, pp. 7-14
September 30, 1939, pp. 7-20

Year ending: 1940, pp. 7-18
1941, pp. 7-14
1942, pp. 7-23

PUBLICATIONS OF LEROY U. GARDNER, M.D.

Vol. III. Appendix

Report of the Trudeau Foundation by Leroy U. Gardner, Director,
appearing in the Annual Medical Report of the Trudeau Sana-
torium and the Medical Supplement for the years ending:

September 30, 1939 - 3 pages

September 30, 1940 - 4 pages

September 30, 1941 - 4 pages

September 30, 1942 - 5 pages

Material assembled for binding

August 30, 1958

SARANAC LABORATORY STUDIES

Reprints of Scientific Papers

1937 - 1941 (Bound Volume)

CONTENTS

- 1937 -

The Saranac Laboratory for the Study of Tuberculosis of the
Edward L. Trudeau Foundation. Report of Director and
Financial Report for the Year Ending September 30, 1937.

* VORWALD, ARTHUR J. Experimental Tuberculous Infection in the
Guinea Pig Foetus Compared with That in the Adult.
Am. Rev. Tuberc. 35:250-275, February 1937.

DWORSKI, MORRIS. Comparative Ventricular White Blood Counts
in Normal Guinea Pigs. Am. Rev. Tuberc. 35:740-752,
June 1937.

DWORSKI, MORRIS and DELAHANT, ANTHONY B. Comparative Ventri-
cular White Blood Counts in Experimental Primary
Tuberculosis in Guinea Pigs. Am. Rev. Tuberc. 25:753-
762, June 1937.

* VORWALD, ARTHUR J. and LANDAU, ARTHUR Influence of Dusts on
Tuberculous Infection - Susceptibility of Subcutaneous
Lesions Produced by Dusts to Infection by Tubercle
Bacilli Injected Intravenously. Arch. Path. 24:8-18,
July 1937.

BRUNFEL, D.M. and GARDNER, L.U. Silico-Tuberculosis.
Am. Rev. Tuberc. 36:757-762, December 1937.

GARDNER, LEROY U. Silicosis and Related Conditions. J. Indust.
Hyg. and Tox. 19:111-125, March 1937.

* Not included in the bound volume of SARANAC LABORATORY STUDIES.

SARANAC LABORATORY STUDIES

THIRD SARANAC SYMPOSIUM

- 1937 -

- * GARDNER, LEROY U. Third Saranac Symposium on Silicosis, Saranac Lake, N.Y., June 21 to 25, 1937, conducted and edited by Gardner, L.U., and Kuechle, B.E., Vice-President and Claims Manager, Employers Mutual Liability Insurance Company, Wausau, Wis. (Out of print).

SARINO LABORATORY

Shown at the left the new JOHN F. SARINO LABORATORY
 December 1984

Mr. and Mrs. Frank Black donated the five new rooms on the second floor (the memorial library and lecture room and the study hall on the old building was extended in order to join the roof of the new wing with that of the old building, creating another large well-lighted room in the rear of the building).

THE HISTORY OF THE SARANAC LABORATORY

1885 - 1958

The beginning of the Saranac Laboratory is best described by its founder, Dr. Edward Livingston Trudeau, in the paper he read before The Lecturer, a Society for the Study of Tuberculosis, at the Johns Hopkins Hospital, May 1, 1901:

"I must apologize for talking of my own work . . . My experiences may prove an encouragement, perhaps, to those of you who are to locate at distant points, as demonstrating the possibility of doing scientific work in remote regions, far from the centres of learning, and they may prove of interest to a Society such as yours as describing the foundation of the first laboratory in this country devoted to researches in tuberculosis.

"I met from the first many difficulties to contend with: no health, no scientific training, no apparatus, no access to books, and was situated forty-two miles from a railroad, in a primitive forest, where I had gone in search of health.

"My inspiration was Koch's paper on the Etiology of Tuberculosis, of which I read an extract in a medical journal in 1882, and which was translated into English and sent me by a patient*.

"In some of the short visits I was enabled to make to New York, Dr. Frederick taught me how to stain the bacillus, and the first principles of bacteriology, and I taught myself the rest as best I could. My laboratory was a very small room in my house, in which, during the intense cold of winter, water froze at night in spite of my best efforts, as we had no coal in Saranac Lake in those days, and the wood stove could not be counted upon to burn all night. I had no apparatus but my microscope. With Dr. Koch's paper as a guide I succeeded, however, in growing the tubercle bacillus in a homemade thermostat which had no regulating apparatus and which was heated by a small kerosene lamp only. In order to protect this from the violent changes of temperature, which occurred particularly at night, I had enclosed it in a series of wooden boxes, the doors of which could be opened or closed at will, according to the intensity of the cold out of doors. But on very cold nights I was obliged to get up in the night to make a fire in the stove in order to prevent too violent changes of temperature in my little oven.

"With these primitive arrangements, after many failures, I obtained the tubercle bacillus in pure cultures, being, I believe the second observer in America to do this. With these cultures I repeated all of Koch's inoculation experiments. My guinea pigs had to be kept in a hole under ground, heated by a kerosene lamp, this being the only spot in Saranac Lake where they could escape freezing at night."

* Mr. Charles E. Lea of the famous Philadelphia publishing house.

** Dr. T. Mitchell Prudden who had worked in Koch's laboratory and who then taught pathology at the College of Physicians and Surgeons.

THE HISTORY OF THE SARANAC LABORATORY

These quarters were so cramped that Dr. Trudeau soon built a little addition off his office and this was the laboratory in which he worked until his house was destroyed in 1893 by fire originating from the little thermostat.

In his autobiography Dr. Trudeau describes his laboratory in these words: ". . . I can see clearly the room opening from my little office, which was really the beginning of the Saranac Laboratory for the Study of Tuberculosis. One side of this room was occupied by a long, high, stationary shelf-table set against the wall under three little half-windows, with shelves underneath the table for glassware, a dry and a steam sterilizer, an oil stove, etc. A little homemade thermostat, heated by a minute kerosene lamp, without any regulating apparatus, stood on a bracket-shelf next to a sink of washing glassware. This sink was as primitive as the thermostat, as there was no running water in Saranac Lake in those days. At one end on a broad shelf stood a big pail with a dipper and this supplied the water (there was of course no hot water), and the waste from the sink was carried off by a leaden pipe which led to a big pail on the floor, this pail being emptied out of doors when danger of its overflow made this imperatively necessary. At the window was a small table with my microscopes on it, some bottles of stains, and slides in boxes. By the side of this stood a shelf of books, on top of which was always Mr. Lee's precious translation of Koch's paper, to which the Saranac Laboratory has owed its existence.

"With this humble outfit I began with much enthusiasm, in my imagination, the conquest of the tubercle bacillus, and if I have never come within sight of the castles of my dreams, I at least have made some progress along the road leading to them and started others in the same direction, for I was, as far as I can ascertain, the first in this country to cultivate the tubercle bacillus and confirm Koch's brilliant discovery. From the ashes of the little room has sprung the Saranac Laboratory for the Study of Tuberculosis . . ."

Doctor Trudeau's first publication, *An Experimental Research upon the Infectiousness of Non-Bacillary Phtisis*, was published in the *American Journal of Medical Sciences*, October 1895, a record of experiments demonstrating the infectiousness of bacillary sputum and the harmlessness of expectoration free from bacilli taken from a patient supposed to have consumption.

In 1896 Doctor Trudeau studied the influence of extremes of environment in the course of inoculation tuberculosis. Many of the inoculated rabbits allowed to run wild on an island recovered or developed only localized disease, while those placed under the most unhygienic conditions died of tuberculosis in a few months. The results of this research confirmed Doctor Trudeau's faith in the value of the sanatorium and open-air method of treating tuberculosis.

THE HISTORY OF THE SARANAC LABORATORY

During the same week in which Koch's announcement of the discovery of tuberculin and of his hopes as to its specific curative action on tuberculosis was flashed across the ocean, Dr. Trudeau published in the November 22, 1890 issue of the Medical Record an article describing his attempts at the production of artificial immunity in animals by the injections of sterilized and filtered liquid cultures of the tubercle bacillus (tuberculin), and his failure to obtain any appreciable degree of immunity by this method.

The arrival of Dr. Edward H. Baldwin from New Haven, Connecticut, marks the beginning of the second epoch in the Laboratory's history. In December 1892 he rang Dr. Trudeau's doorbell and told him that he was a physician, that he had contracted tuberculosis, and that he wanted to go to the Sanatorium, which he entered six weeks later. The day after Dr. Baldwin came to town he visited the Laboratory, at Dr. Trudeau's invitation, and offered to help in any way. Dr. Baldwin became a constant presence in the Laboratory and Dr. Trudeau learned to learn more and more on him and finally turned this branch of work over to Dr. Baldwin entirely. Dr. Trudeau mentioned in his autobiography: "Doctor Baldwin in those days knew even less than I did about the new science of bacteriology, and I gladly taught him all I knew, and as gladly does he teach me now the latest advances in a branch of medical science in which he is an expert and an acknowledged authority. Many happy hours did we spend working in the Laboratory together, and now that I cannot work with him anymore he brings to my bedside the latest literature and tells me of the work he and others are doing."

It seems fitting to quote here from an article by Dr. Allen F. Peters, Reflections on Doctor Trudeau, which appeared in the January 1925 issue of the Journal of Outdoor Life, as follows: "For years Baldwin would carry his bundle of the literature over to the doctor's house on the evening and then read to him what was going on in tuberculosis, particularly in Germany, and since the younger man could not handle French, the doctor would tell him what was happening in the land of his own extraction. This pair formed an almost ideal combination for scientific work."

Dr. Baldwin was soon made Director of the Laboratory and this position he held until 1926. With the late Dr. Walter E. James, Dr. Baldwin inaugurated The Edward Livingston Trudeau Foundation in 1916 and was the first director of the Foundation and of the Trudeau School, which positions he held from 1916 to 1922. In 1927 Dr. Baldwin was awarded the Trudeau Medal for outstanding contribution in the field of tuberculosis; in 1926 he received the Kober Medal for outstanding achievements in medicine, and in 1927 Dartmouth conferred upon him the degree of Doctor of Science.

THE HISTORY OF THE SALMONAC LABORATORY

In the winter of 1893 while Dr. Trudeau was ill in New York his house and laboratory burned to the ground. Among the telegrams, letters of condolence and cheer, and offers of help which poured in was one brief but striking note from Dr. William Osler, as follows:

"Dear Trudeau: I am sorry to hear of your misfortune, but take my word for it, there is nothing like a fire to make a man do the Phoenix trick."

Dr. Osler's prophecy was soon fulfilled. Mr. George C. Cooper of New York, whose family gave to New York the Cooper Institute, a friend and patient of Dr. Trudeau, called on him the day after the fire. He told Dr. Trudeau to begin to plan a good stone and steel laboratory, one that would never burn up. In Mr. Cooper's words: "Plan it just as you want it, complete, and I will be glad to pay for it and give it to you personally."

Mr. Cooper was not satisfied with the mere establishment of the material facilities for investigation, which his gift of the laboratory afforded, but in association with Mr. John Garrett of Baltimore gave a fund sufficient to carry on researches for several years, while a brother of Mr. Garrett, Mr. Horatio Garrett, provided a fund for a library.

While the laboratory was in process of construction a small addition to the stable on Dr. Trudeau's property was built and served as a temporary laboratory in which, for a year, the work, through the generosity of Mrs. Robert Hoe, was carried on.

During the spring and summer of 1894 work steadily progressed on the new laboratory and by fall it was nearly completed. Dr. Trudeau facilitated matters by presenting the land on which it was placed, which was part of his house lot on Church Street. Dr. Trudeau described the new laboratory in these words:

"The building is a most substantial and dignified structure. As nothing but cut stone, glazed brick, slate, steel and cement entered into its composition, it is absolutely fire-proof and it has not been necessary to insure it. The inside is all finished in white, glazed brick, and it looks absolutely indestructible—as if it were built not for time but for eternity! The Phoenix trick will not have to be repeated soon so far as the building is concerned. It is equipped with fine, self-regulating thermostats, gas, electricity, and every modern appliance for facilitating laboratory work."

THE HISTORY OF THE SARANAC LABORATORY

"No name has been written on the outside of this compact little structure to indicate its uses, but in the inner hall over the door of the main room a small brass inscription has been placed, which reads:

Saranac Laboratory
for the Study of Tuberculosis
Erected A.D., 1894
Presented to
Edward L. Trudeau, M.D.
by
George C. Cooper

"We had no opening ceremonies and never have had any. When everything was ready, Baldwin and I merely began to move the apparatus we already had in use from the little shed near the barn to our beautiful new quarters and to continue the work we were doing. This was the opening of the first laboratory devoted to the study of tuberculosis in this country."

Dr. Laurasen Brown mentioned in an article he wrote about Dr. Trudeau in the May 1921 issue of the Journal of the Outdoor Life that Dr. Trudeau wanted to call the laboratory the Cooper Laboratory, but Mr. Cooper wished to name it after Dr. Trudeau. A compromise was made and it was called the Saranac Laboratory. The Laboratory was incorporated in 1900 as the Saranac Laboratory under the Education Law of New York State.

Finances proved a difficult problem for Dr. Trudeau as the Laboratory had no endowment of any kind; however, with the help from his many friends, among whom were Dr. Horatio Garrett, Mr. John Garrett, Mrs. Robert Hoe, and Miss Julia Cooper, Dr. Trudeau was able to pay for the experimental animals, chemicals and apparatus, and to continue research. Mrs. A. A. Anderson (founder of the Milbank Memorial Fund) gave generous checks at first and then, according to Dr. Trudeau's notes, assumed the entire support of the Laboratory for a number of years.

The Saranac Laboratory has had a strong educational influence on the many physicians who have come to Saranac Lake for their health and has offered them an opportunity for study. Among these were Drs. P. A. Levene, Laurasen Brown, H. H. Kitchorn, J. Woods Price, Albert H. Allen, J. L. Nichols, Robert A. Patterson, and Willard B. Soper. One of the most noted of the group was Dr. Allen E. Krause who came in 1910 and worked here for ten years. He relieved Dr. Baldwin of much of the routine work and was later appointed associate director of the Laboratory. His work on the problems of immunity and infection are known to all in the tuberculosis world. Dr. Levene was another outstanding scientist and a pioneer worker at the Laboratory. He conducted important studies on the biochemistry of the tubercle bacillus, continuing his investigations at the Rockefeller Foundation.

THE HISTORY OF THE SARANAC LABORATORY

Dr. Leonard H. Long, associate professor of pathology at the University of Chicago and later director of Henry Phipps Institute, worked with Dr. Baldwin in the Laboratory from 1917 to 1919. Here he started the chemical investigations on the tubercle bacillus which became an important feature of the research program of the National Tuberculosis Association.

Physicians who were staying in Saranac Lake even temporarily and who were disposed to do a piece of work meeting with the approval of Dr. Baldwin and Dr. Trudeau had the facilities of the Laboratory placed at their disposal and were assisted in carrying out their work, which they were free to publish under their own names.

The Saranac Laboratory inspired the formation of a medical society in Saranac Lake which continues to meet in the John Black Room. The Laboratory has been the nucleus about which the medical interest of the community centered. More physicians of the village have brought their problems for solution. The medical library, housed in the John Black Room, has always been open to the physicians and medical patients of the community.

Numerous research studies were conducted during the early years of the Laboratory, as Dr. Trudeau has disclosed:

"How much original work my associates have done was revealed most pleasantly to me on my sixtieth birthday when, after a very pleasant dinner they gave me, they presented me with two most beautiful volumes bound in red morocco, containing seventy papers representing their own studies, which had been published in various medical journals both here and abroad, from 1887 to 1908. These volumes I keep among my treasures and I prize them more and more as the years roll by."

Just before Dr. Trudeau's death on November 15, 1915, the post-graduate course known as the Trudeau School of Tuberculosis, which has its headquarters at the Saranac Laboratory, was founded by the late Samuel Hather. An annual contribution of \$5,000 was contributed by Dr. Hather for the first eleven years, and since 1910 the School has received support from the Lillian Babbitt Hyde Foundation.

Dr. Trudeau died before there was any assurance of the permanency for the research and teaching in progress. It was then that the sanatorium trustees decided to establish a memorial endowment fund to maintain these activities. Created by gifts from Dr. Trudeau's friends, this fund was called the Edward L. Trudeau Foundation. The Saranac Laboratory was entrusted to the Foundation, under whose administration it provides diagnostic facilities to the community and carries on experimental research.

LEROY UPSON GARDNER*

1888-1946

THE recent death of Dr. Gardner has deprived this Journal of one of its associate editors and a valued contributor. We are proud of the papers we published for him, as several of them have been far reaching in their consequences.

While he was a patient at Saranac, Dr. Gardner acquired a paternal feeling for the tuberculous workmen. His long series of studies on the pneumoconioses started with a thorough appreciation of the importance of tuberculosis in the dusty trades. For years the Saranac Laboratories have carried along their own strain of tubercle bacilli which Dr. Gardner customarily applied in his biological appraisals of various dusts.

He started his animal dusting experiments at a time when some able men were still blaming the hardness and sharpness of silica particles for producing the silicotic nodule. Dr. Gardner showed it was reasonable to appraise potency in terms of the free silica content of the dust. He found that granite dust would not produce the typical silicotic nodule in his guinea pigs, yet he could do it easily with pure quartz. He had abundant evidence that granite cutters died of silicosis and reported typical nodules at autopsy. He realized his failure to produce the nodules in guinea pigs was due to the fact that the granite dust was less harmful than the quartz dust so the guinea pig's span of life was too short for silicosis to result.

From then on his biological appraisals of dust were referred to pure quartz dust as control. Many studies followed showing the comparative harmlessness of the non-silicious dusts. Gradually state codes and rules were proposed purporting to evaluate atmospheric dustiness in terms of exposure to quartz dust. Dr. Gardner viewed these codes with skepticism and his wise counsel kept them on a practical basis.

In some other studies he showed that silica particles below 3 microns in size were much more dangerous than those of 6 to 12 microns. A little later he found that asbestos particles of bacterial size would not produce the typical asbestosis pathology, while the long fibers thrown into the air in processing asbestos minerals would cause asbestosis. Both of these findings had practical usefulness to industry and both added greatly to our knowledge of the pneumoconioses.

At various meetings and by correspondence, I had often discussed with him the possible effects upon open tuberculous lesions of moderate concentrations of irritating gases and vapors. He used to cite the considerable volume of work published after World War I on this very subject—all indicating the comparative harmlessness to the tuberculous individual of casual exposures to irritants. He admitted this point of view was usually not accepted by the lay public, and especially by compensation boards. At the request of some of us he showed that welding fumes in heavy doses had no effect upon tuberculous guinea pigs. If he had only been given a little more time he might have extended this particular study to include other common irritants. The appeal, to him, would have been the help he would thus be giving the tuberculous workmen.

He was a fine teacher. The series of symposiums on silicosis which he started in 1934 and continued until World War II became the meeting place for all who were technically interested in the subject. Dr. Gardner carried the lion's share of the work and edited the transactions which quickly earned for themselves the position of textbooks.

Altogether, industry's debt to him is great and we all hope that the Saranac Laboratories will continue the work in which he pioneered.—

Philip Drinker
