Mr. David K. Goering
Dept. of Zoology
University of Arkansas
Fayetteville, Arkansas

Dear Mr. Goering:

Dr. Koeman reported results of polychlorinated biphenyls Phenoclor DP 6, Aroclor 1260 and Clophen A 60 on fish, mussels and birds. He indicated that the more highly chlorinated compounds are most persistent. I have requested that a 2 pound sample of Aroclor 1260 (60% chlorine) be sent to your attention.

We would like to review results of your investigations in avian reproductive physiology when they become available.

A technical bulletin is also enclosed.

Very truly yours,

W. R. Richard
Manager, Res. & Dev.
