Gentlemen:

We are trying to determine if a maximum allowable concentration for lead acetate has been established. To date, our efforts have been unsuccessful. Is it possible that you could assist us on this point?

As a matter of general knowledge, would it be feasible to use the MAC of lead for those compounds of lead for which no limit has been set?

We shall appreciate hearing from you at the address below.

Very truly yours,

(Miss) Hilda M. Reitzel
Librarian
