JUN (- REC'D

MONSANTO CHEMICAL COMPANY — Inter-Office Correspondence

From LOCATION : Detroit, Michigan

cc : R. Davis - St. Louis

DATE : June 6, 1961

SUBJECT : GENERAL MOTORS - Pydraul A-200

REFERENCE :

TO : Mr. Elmer Wheeler
St. Louis

For one of their manufacturing divisions which is considering the use of Pydraul A-200 in die casting machines, Mr. Hoecker is investigating the products of combustion or decomposition. The plant has found that rags saturated in A-200 will ignite and that the fluid, when sprayed into a source of ignition, produces heavy fumes.

Could you furnish all necessary data required by their industrial hygiene group for approving the use of Pydraul A-200 from a toxicity of vapors viewpoint. This information should be sent to:

Mr. George C. Stoecker
Industrial Hygiene Department
General Motors Technical Center
12 Mile and Mound Roads
Warren, Michigan

Many thanks.
