

where stock points have not been set or set unrealistically based on marketing's estimate of potential sales. Phil Partington stated that Production Control was following the SBR system and that the system, plus the shortage of warehousing space, does not allow for a lot of flexibility. It was agreed that if marketing wanted longer runs or increased stock points, they would have the responsibility of arranging outside warehousing.

BALL MILL DUST

T. Jago reported that we are experiencing problems with producing Ferrux with ball mill dust shipped in by rail and containing a high aluminum content. He stated that he questions the value of the new unloading facility which was to give us the flexibility to use trucks when this condition occurred; however, he stated it sometimes takes three days to get a truck in to our plant. Mr. Partington requested to review the situation.

*Problem in getting material pulled without
check the facility in down - then if
high or low in here in the mill -
being okay
just wait*

SALES MEETING

Bill Sutherland reported that the Division sales meeting is to be held July 26^{7th} and 27 at Aquamarine, and that an agenda had been distributed to all interested parties.

PATENT INFRINGEMENT

T. Jago reported that Universal had been notified of their infringement on our curved board patents, and that the matter is now in the hands of our representative attorneys. The decision was made to have the attorneys also notify PMP of infringement.

ASBESTOS FREE RECIPES

T. Jago reported we currently have two recipes with lower asbestos content. He stated, however, that a recipe for producing rings is a problem, and that we will probably be only able to get these recipes down to between eight and ten percent asbestos. He stated he was confident of getting the Profax 31 recipe down to a virtual zero percentage.
