

March 24, 1941.

Inspection Report- Laboratory
State of Florida-Tallahassee, Fla.

DR. OSCAR B. LEWIS,

Dear Oscar,

On March 24, 1941, an inspection was made of the Laboratory Hood in the gasoline testing department of the State of Florida, located in Tallahassee. Mr. Halls Berryman is in charge of this laboratory. The last inspection of this laboratory was on November 5, 1940.

The condition of the Laboratory Hood is good. There is one can of fluid (No. M 662) on hand and it is kept stored in the Laboratory Hood provided for this purpose. There was no evidence of fluid mishandling and all necessary equipment is available for use when the fluid is handled.

No lead has been used since last inspection. Mr. Berryman advised me that the lead on hand would be used up shortly, after which they do not intend to order any more.

Very truly yours,

W. H. Phipps.
