March 31, 1944

Mr. Howerton-Plant B
Mr. Weaver-Anniston

We asked General Electric Company about the equipment necessary to make the impregnation test on Aroclor 1254 (No. 1476 Pyranol). This refers to our memorandum of February 18 to Messrs. Weaver and Howerton relative to specifications on Aroclor 1254 and 1260 and Pyranol 1488.

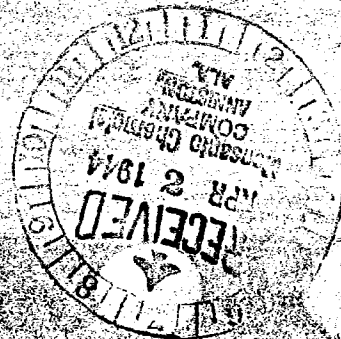

Mr. Howerton states in his memorandum of February 25 that after the information is obtained from Mr. Clark he can then make a decision as to whether Plant B can install the equipment.

We should appreciate a prompt response.
