

OD 12816

[REDACTED]

12-4-1939

For complete physical examination, including
microscopic examination of blood (erythrocyte,
leucocyte, differential leucocyte, and stippled
erythrocyte count) and determination of hemo-
globin of the blood, clinical urinalysis, and
for daily supervision at hospital \$25 00

For 18 analyses for lead on blood, urine and
feces at actual cost of \$5.00 per analysis . . . \$90 00 *

Total \$115 00

* Despite the fact that in our opinion the series of analyses was required in this case to determine the facts beyond doubt, it is recognized that the Commission may not hold to our view. It might be believed that our interest in problems arising from occupational and non-occupational lead exposure was sufficient to justify this investigation, as indeed it was. We, therefore, leave the matter of the allowance for compensation entirely to the discretion of the Commission.
