

 Manufacturing	Guideline	Number G3-19	Page
		Date Sept. 1984	5

- Asbestos Cement Products: welding shields, siding, mastics, sealers.
- Miscellaneous: acoustical and sprayed thermal insulation, asbestos powder, bulk fiber.

4.4 General Precautions

The work practices listed in Sections 4.1 and 4.2 are intended to help minimize the hazards involved in handling asbestos during insulation removal and brake and clutch repair. In addition, the following general precautions are recommended:

- 4.4.1 Employees must be trained in the proper use and limitations of respirators. A slide-tape training program is available from Employee Health Services.
- 4.4.2 Respirators must be cleaned and disinfected after each day's use.
- 4.4.3 Employees must be evaluated by medical personnel to determine if they are qualified to do required tasks while wearing respirators.
- 4.4.4 Initial monitoring must be conducted (as prescribed in CFR 1910.1001 (FX1)) to determine if employees exposure to asbestos is below permissible levels.
- 4.4.5 If an asbestos exposure problem is suspected, the Industrial Hygiene and Toxicology Department must be contacted to measure asbestos levels and advise of other provisions of the applicable standard relating to respirator usage and record keeping. An industrial hygiene survey including air sampling will assure that employee health is protected and that the Company is in compliance with OSHA regulations.
- 4.4.6 Regulations promulgated by EPA under the Resource Conservation and Recovery Act (RCRA) identify asbestos as a listed hazardous waste. When disposed of as a waste "commercial chemical product," such materials must be disposed of only in a RCRA-permitted hazardous waste landfill. This requirement underscores the need for segregation of asbestos-containing waste from other plant waste. Encapsulated materials and manufactured articles containing nonfriable asbestos are not classified as hazardous wastes under RCRA. Refer to Stationary Source Environmental Control Office for specific federal, state and local disposal requirements for asbestos containing materials.
