Talc and the OSHA

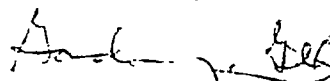

Asbestos Standard 29CFR 1910.1001

Cyprus Industrial Minerals Company's Montana talc based products are free of asbestos as defined by the OSHA Safety and Health Standards (CFR 1910.1001 (a)).

Although our California talc based products generally show no asbestos minerals at the lower limits of detectability by x-ray diffraction, they may occasionally show trace amounts (0.1% - 0.3%) of tremolite. Our program of continuing checks of airborne dust at our California Cyprus manufacturing plants indicate airborne fiber levels below the allowable TLV. In addition, these fiber checks are monitored by electron microscopy, resulting in a more accurate and sensitive test. Thus, we feel compliance is assured under the standard outlined in 1910.1001.

We attach a list of Montana and California based talcs for your reference and suggest that this letter be kept with previous correspondence on this subject. As new regulatory data is published we will provide further clarification.

Sincerely,

Gordon J. Gill
Vice President
Technical Service
