We have received sixteen skids of 1/16" Victopac 61V material with lace scrap imbedded into the surface of the material.

Confirming our telephone conversation, we will sort this material, pick-off the "spot" defects, and therefore salvage the greatest portion of this shipment. We will do this as soon as we can assign personnel to this project. It is estimated that it will take us six man days to sort this material at an out-of-pocket cost of approximately $150.00. We will charge Plant 4 for this sorting operation.
