

STEEL AND LINING

are firmly bonded in

HOMOGENEOUS LEAD LINED EQUIPMENT

SO COMPLETELY and firmly is the chemical lead lining secured to the shell of our tanks, evaporators and other processing equipment that the lining is inseparable from the steel under vacuum, pressure and temperature variation up to within a few degrees of the melting point of the lead itself.

This inseparability, plus the well-

known resistance of lead to the corrosive attacks of chemicals, assures long life for the equipment and freedom from expensive shut-downs due to repairs.

When you next select equipment for processing or the storage of corrosive liquors investigate the advantages of Homogeneous Lead Lined products.

NATIONAL LEAD COMPANY

111 Broadway, New York, N. Y.

Sole Selling Agents for Homogeneous Lead Lined Equipment Manufactured by the Treadwell Construction Co. of Midland, Pa.
