Dear Sirs:

I would greatly appreciate knowing the chemical breakdown of the products that would get into the surrounding air from your Red Mix Joint Compound.

I have a young male patient who gets asthma every time he is exposed to the open can or any fresh application of the product which his father uses while building their home.

Knowing what it is, I can intelligently advise the parents what similar products should be avoided.

Thank you.

Sincerely,

W L Venning 140

William L. Venning, MD
