March 11, 1971

Mr. Nick Malueg
Environmental Protection Agency
Room 614
511 N.W. Broadway Street
Portland, Oregon 97209

Dear Mr. Malueg:

Confirming our telephone conversation, I have made arrangements to have appropriate size samples of our Aroclors 1254 and 1260 forwarded to you. These products are biphenyl chlorinated to 54 and 60% chlorination respectively.

I have also arranged to have sent to you our packet of analytical techniques for whatever interest they may be. You will find, I believe, that we have made some refinements in the original methods used by the Swedish scientists in defining polychlorinated biphenyls along with pesticide residues.

I did not mention in our conversation that we have one individual in the company who is spending full time on working with various government groups, universities and customers on the problem of PCB's and detection in the environment or eco-system. He is Mr. William B. Papageorge who is actually the individual arranging to send you the materials indicated above and will be corresponding with you.

If after working initially with the Aroclors 1254 and 1260 you find you would like additional samples of these materials or of the other chlorinated biphenyls, I am sure Mr. Papageorge will be happy to provide them.

STLCOPCB4001567

I am also sure Mr. Papageorge will offer the services of our most expert analysts if we can be of any assistance in reference to analytical techniques and interpretation.

Very truly yours,

Elmer P. Wheeler
Manager, Environmental Health
