PERSONAL

August 18, 1937

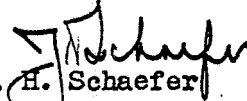

Mr. R. A. Kehoe,

Dear Bob:

In further reference to your recent letter regarding the I. G. patent on the use of fluorides for stabilizing tetra-ethyl lead, attached is copy of letter received today from Graham Edgar which will be self-explanatory.

Meanwhile, however, I will pass along to you the information I receive directly from Karl Mueller of the I. G. (Chemmyco) New York office. Depending upon the nature of this reply, we can consider further action that might be necessary.

Very truly yours,

  
J. H. Schaefer

Mr. John H. Schaefer

My dear John:

I have your letter of August 16th with reference to the German patent on fluorides.

I cannot get very much interested in this matter. Our own tests at the laboratory did not indicate any stabilizing action and the I. G. offered to make patent application in the United States for our account which we refused.

Personally, I see no particular reason for pushing this matter.

Very truly yours,

Graham Edgar
