Dear all,
 For your information, we have been contacted by FPG with regards to fluoropolymers and a meeting to discuss the industry RMOA. We responded in the usual way, that we will come back to that later on when we have analysed the information recently submitted.

Kind regards,

5.1.2e

Dear 5.1.2e,
 Thank you for your email and for your request for a meeting. Currently, we are in the process of evaluating all the responses from the 2nd CfE. A meeting would not be prioritized from our side until we have had the chance to look through all information submitted and update our assessments. However, we will contact you when our evaluation has progressed further to clarify any remaining or new questions that come up during our evaluation.

Best regards,

Dear 5.1.2e,
 I hope this e-mail finds you well. I'm contacting you on behalf of the [Fluoropolymers Product Group](#) (FPG) to follow-up on the e-mail below and kindly ask you if you would be available for a meeting so we can further discuss the results of the RMOA for Fluoropolymers conducted by ChemService.
 Many thanks in advance for considering our request.

Best wishes,

5.1.2e

Subject: PFAS REACH proposed restriction - Fluoropolymers Product Group RMOA study

Dear 5.1.2e,
 The Fluoropolymers Product Group (FPG) has commissioned the consulting firm ChemService to perform an independent Regulatory Management Option Analysis (RMOA) for Fluoropolymers. You can find the full study attached. ChemService's RMOA has concluded that the best regulatory option to deal with concerns about fluoropolymers (FPs) will not be a full restriction but a combination of the following measures:

- A derogation of FPs and relevant monomers from the PFAS REACH restriction, supplemented by a Voluntary Industry Initiative which guarantees that industry will address the situations of concern related to manufacture and use of FPs
- an update of existing EU regulations on waste that would impact the end-of-life treatment of FP products, ensuring adequate technical controls are put in place to minimize to the furthest possible extent any risk derived from the disposal of FP products and from articles containing FPs

The study has also confirmed that there are no alternatives that can replace the high performance provided by fluoropolymers in “virtually every critical application in which they are used”.

I will be pleased to have a meeting with you to answer to any questions you might have about this report and present our next publication on the phase use of our products.

Do not hesitate to contact me.

Kind regards,

5.1.2e
