

Sealing Products Exclusively

The research, production, and distributing facilities of the Victor Company are devoted entirely to the manufacture of gaskets, oil seals, gasket materials, sheet packings, and kindred sealing products. Practically all of these products, with the exception of cork gaskets and sheets, are produced from basic raw materials within Victor Plants.

ORIGINAL EQUIPMENT

The Victor Company is the largest supplier of gaskets and oil seals for original equipment installation to manufacturers and producers of automotive vehicles, passenger cars, light and heavy trucks, tractors, busses, and farm equipment. The same wide variety and quality of product is supplied for REPLACEMENT applications.

INDUSTRIAL

The Victor line embraces a variety of gaskets, oil seals, and packings used in production and maintenance outside of the automotive field. Special catalogs are available for industrial gaskets and oil seals.

RAILROADS

Victor products are widely used in diesel locomotives, steam locomotives, and various railroad devices and equipment.

MILITARY REQUIREMENTS

The builders of heavy duty engines and equipment depend upon Victor to supply most of their cylinder head and other gaskets. Likewise, U. S. Military and the prime contractors have depended upon the wide experience of Victor engineers in the development of oil seals for critical applications.

GASKETS

Full coverage for all automotive installations including cylinder head, manifold, oil pan and miscellaneous applications of various types and constructions designed to function effectively under all operating conditions.

VICTOPRENE OIL SEALS

Victor pioneered the development and manufacture of oil seals using a compounded elastomer sealing element which is now the preferred type for the most severe as well as standard applications and is rapidly replacing other types for general use. Only engine applications of oil seals are listed in this catalog. For a complete listing, including wheel applications, see the latest Victor Oil Seal Guide.

SPECIAL PACKING MATERIALS

Among Victor sealing products are especially compounded packing materials used in fabricating gaskets and oil seals. These, for the most part, are

developed and manufactured from basic materials and for specific requirements.

Asbestocork	Silicone	Victoplate
Asbestopac	Teflon	Victorite
Asbestoprene	Victolene	Victocor
Asbestos Millboard	Victolex	Victocork
Corbestos	Victopac	Victoprene
Sol-COR		

ARMSTRONG-VICTOR CORK GASKETS

The Armstrong Company, the world's leading producer of cork products, and the Victor Company are associated in supplying the trade with the finest quality and best merchandised line of cork gaskets, cork sheets, and other cork products. The dimensional accuracy and uniform density of Armstrong-Victor sheet cork, from which gaskets are blanked, is assured by the new dielectric curing process developed by the Armstrong Cork Company.

GASKET SETS

Head gasket sets, general overhaul, and other gasket sets are in wide demand. While Victor Gasket set coverage is by far the most comprehensive, facilities for making sets are constantly being expanded.

NUMBERING AND LABELING

The Victor numbering system is simple and convenient. Packages and sets bear legible printed labels listing the manufacturer's part number and also the corresponding Victor Replacing number in bold figures. Gasket and oil seal numbers are also imprinted upon the product.

CATALOGING

Clear, concise, and comprehensive cataloging is essential to the marketing of any quality product. The Victor Company is justly proud of the wide acceptance and use of their printed matter of which this Guide is an example. Equally well prepared are catalogs covering industrial oil seals and industrial gaskets.

FOREIGN CAR GASKETS

With increased demand for imported cars in the United States and its ultimate need for replacement parts, Victor has made available the entire line of Payen Foreign Car Gaskets. A special list contains the gaskets for replacement on the most popular foreign car makes and models.
