Robert A. Kehoe, M. D.  
Director  
Kettering Laboratory  
College of Medicine--Eden Avenue  
Cincinnati 19, Ohio

Dear Mr. Kehoe:

I regret that at the time I wished to obtain a sample, that we did not have any of the sampling tubes and bottles from the laboratory available to us. Of course, I certainly do appreciate the problem of the consideration of the medical-legal responsibility of the laboratory. Of course, we used the BD vacutainer type tube which, I believe, is also the type used by the laboratory, and which has been used here at the State Division of Industrial Hygiene laboratory. As for the plastic bottle containing the urine, we have been using this in conjunction with Len Goldwater's study of normal values of lead, mercury and arsenic in blood and urine, and his group apparently has been satisfied with the absence of these contaminants in this plastic.

Nevertheless I regret putting the laboratory in this position, and trust that the conditions of collection are not incompatible with your usual rigorous analytical methods.

Best regards to all.

Sincerely,

B. D. Dinman, M. D., M. Sc.  
Associate Professor
