JENKINS BROS.

100 Park Avenue, New York 17, N. Y.

Bridgeport, Conn.; Boston, Philadelphia, Chicago, San Francisco, Atlanta

DO YOU HAVE THIS HELPER?

For clear, complete, easy-to-find data on valves and how to select and use them, reach for this latest Jenkins Catalog.

HELPFUL FEATURES

FOUR TYPES OF INDEXES LEAD QUICKLY TO DATA NEEDED

Four-way indexing—General, Alphabetical, Fig. No., and Sectional—leads the reader instantly to the information desired, from any point of reference . . . pattern, metal, number, or function.

VALVE SPECIFICATIONS LIST ADVANTAGES AND MAJOR USES

Every Jenkins Valve in every group,—Bronze, Iron, Cast Steel, and Stainless Steel—is fully illustrated and described in detail, with an explanation of its principal advantages and uses.

HELPFUL INSTRUCTIONS FOR CHOOSING AND USING VALVES

Thirteen pages of basic information,—"Fundamentals of Valve Design and Application"—serve as a guide in selecting the correct type of valve, and provide instructions for their proper installation and maintenance to assure maximum service life.

USEFUL TABLES AND REFERENCE DATA TO WIN FAVOR OF ENGINEERS

In the 23 pages of the "Engineering Data" section, Catalog No. 56 provides a compilation of useful required tables, charts, and codes —the information wanted by the men who plan piping layouts . . . *and specify valves.*

From cover to cover this 296 page general catalog of Jenkins Valves was designed to give specifiers and buyers all the data they want . . . and FAST. It's the book to reach for FIRST when you need valves or valve information. Write for your copy.

MARSH INSTRUMENT COMPANY

Division of Colorado Oil and Gas Corporation

Marsh Instrument and Valve Co. (Canada) Ltd., 8407 103rd St., Edmonton, Alberta

Dept. 5, Skokie, Illinois
Branches in Principal Cities

Houston Branch Plant: 1121 Rothwell St., Sect. 15, Houston, Texas

Marsh products include: Pressure, Vacuum and Compound Gages; Dial Thermometers; Steam Traps; Vents; Packless Radiator Valves and Radiator Traps; Refrigeration Water Regulators; Refrigeration Testing Instruments; Solenoid Valves; Needle Throttling Valves.

Radiator Traps—Equipped with the famous Marsh phosphor bronze diaphragm charged with volatile fluid. Extremely rugged, but so sensitive it closes tight on steam and opens instantly to pass condensate and air at only a few degrees below closing temperature. Highly efficient on pressures from below atmospheric up to 25 psi. Other traps available for pressures up to 125 psi.

Marsh Radiator Trap and Packless Valve. Both are available in full range of patterns

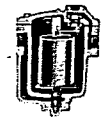

Packless Radiator Valves—Not just packless in name; ingenious Marsh annular mechanical seal does away with packing of any kind. Valves close on less than one turn. For either steam or hot water. Maximum water pressure, 125 psi.

Float and Thermostatic Traps—Designed for complete removal of air and condensate from steam mains, branches and risers. Condensate discharged through float operated valve at bottom; air through vent in top. Wide range of pressure and capacity ratings. One of the many float and thermostatic traps is illustrated. Line also includes float traps.

Marsh Float and Thermostatic Trap.

Inverted Bucket Traps—Marsh quality and performance in a trap for applications where the inverted bucket type is indicated.

Marsh Inverted Bucket Trap.

Air Vents—Antomatically remove air and gasses from tanks, coils or piping, liquid pump systems, and other similar applications. Float holds valve tightly closed when system is filed. Opens only when air accummulates. Has vacuum check which prevents return of air. Type illustrated is for working pressures up to 125 psi. Other types, including float and thermostatic types, for low pressure.

Marsh No. 50 Air Vent

Solenoid Valves—meet a wide range of needs. Latest addition to line is the "Master-mite", illustrated, designed to meet the need for positive-acting tight-seating valves for many uses. Two types: direct acting conduit and grommet types (conduit type illustrated.) Two port sizes: ⅛ in. and ¼ in. NPT. Ten orifice sizes: 3/64 in. through ¼ in. Wide range of voltages: 12, 24, 115, 208, 230 and 460V, a-c. Pressures from vacuum to 540 psi. Underwriters' approved as safety valve. Other Marsh Solenoid, both direct acting and pilot operated, cover a broad range of requirements.

"Master-mite" Solenoid Valve Conduit type

Pressure Gauges and Dial Thermometers—The respected Marsh line covers every requirement for pressure, compound, altitude gauges, ther-altimeters and dial thermometers. Marsh instruments are the product of nearly a century of experience. Sizes, ranges and case styles for all needs.

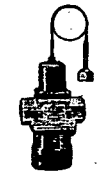

Marsh Ther-altimeter (Square and Round types)

Marsh Ounce-graduated retard gauge

Refrigeration Valves—Recent addition to the Marsh line of water regulating valves is the Type 56 pressure actuated regulator illustrated. It is adjustable for both Refrigerant 12 and 22—adjustable from 60 to 270 psi—by simply twisting handy knurled cap on bottom. Although small and compact for installation in tight quarters, it has ample capacity for wide range of applications. Other Marsh Water Regulators, both temperature and pressure actuated, for practically every cooling or heating application.

Type 56 Water Regulator

Piping and Duct Thermometers—Designed expressly for piping, air ducts, vessels, kilns, ovens, etc. Unbreakable. Greater reading accuracy than glass tube thermometers. Complete line: 4 types; 7 ranges; 72 combinations to meet every condition. Big legible 3½ in. and 4 in. dials easily tilted or turned to any reading angle. Direct mounted types are illustrated, but line also includes distant reading types. Separable sockets make installation easy. Extension necks for insulated piping or ducts. Long stems in duct types place temperature-sensitive section where it should be for accurate indication.
