Doctor Robert A. Kehoe,
Kettering Laboratory of Applied Physiology,
University of Cincinnati,
College of Medicine,
Cincinnati, Ohio.

Dear Doctor Kehoe:

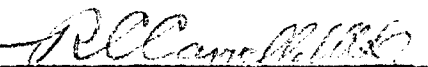

I wish to acknowledge your letter of January 7, 1942 relative to Ethyl Fluid and also a group of pamphlets on the same subject. The reprints have been reviewed and turned over to other members of our staff for reading.

I feel that the Lago Oil & Transport Co. Ltd. Management and its efficient Safety Department will see that all of the safety instructions furnished by your company are carried out. However, from time to time the Medical Department will inspect the equipment and confer with the Safety Department director.

While I feel that the general subject is clear, we would appreciate receiving from you an outline of the procedures and examinations which you consider essential for periodic re-examination of men employed in Ethyl Fluid blending. Until we hear from you, we shall follow a previously outlined procedure which we have used in the re-examination of all personnel dealing with lead or lead containing substances.

We wish to thank you for the information which you have sent to us so far and wish you to know that we shall be glad to receive any new information from time to time which you feel may be of value to us.

Very truly yours,

R. C. Carrell, M. D.
