

Monsanto to build phenol plant on West Coast

Construction of a new Monsanto plant to produce phenol will get underway in mid-year on an 83-acre site at Avon, California.

The new unit, which will be in production in 1954, will supply phenol to contract customers of the growing West Coast industrial area. It also will supply the expanding needs of Monsanto's Pacific Coast manufacturing operations.

Monsanto's West Coast plants make phenolic resin adhesives and various other phenolic resins. Future plans call for the addition of a number of industrial and agricultural chemicals to the western production.

FOAMING CONTROLLED

Monsanto AE-1—a new high-molecular-weight alcohol ester—has definite defoaming applications. Also, other uses that yield economics in various processing operations.

some AE-1 applications

It is used as a defoamer in producing ethyl alcohol from molasses... defoamer in producing glycerol from fats... for foam control in the manufacture of yeast and other fermentations... control of foam in certain bottle-washing operations... solving foam problem in polystyrene latex water dispersions... lubricant for vinyls that are extruded or calendered... coplasticizer for rubber hydrochloride and chlorinated rubber.

This list of uses may suggest some interesting applications to you. If so, write for samples of AE-1 and Technical Bulletin No. P-140.

$$\frac{1+1}{2} = 1+$$

Higher detergency from synergistic action

There are numerous places where the higher detergency effected through synergistic action affords important economies in industry cleaning and scouring.

Synergism is achieved by blending Santomerse® No. 1 and Monsanto tetrasodium pyrophosphate with the result that their combined detergencies are higher than the average of the two when used separately; higher than the detergency of either. This effect is of particular consequence in many phases of textile processing.

Many uses for TSPP

Monsanto tetrasodium pyrophosphate is also widely used as a soap builder, household and industrial cleaner and detergent, in bleaching, in dye baths as an assistant for putting certain types of dye in solution, in metal cleaning... For full information, send for Technical Bulletin No. P-24.

HB-40—low-cost extender-type PLASTICIZER

At an l. c. l. price of 17¢ per pound (less in carloads), the use of Monsanto's HB-40 as an extender-type plasticizer will enable you to save as much as 30% to 50% in processing vinyls. Not only does HB-40 help reduce your costs very materially—it also helps you maintain your product quality. Available now in drum and carload lots.

HB-40 is finding wide use in producing vinyl extrusions, vinyl pastes, vinyl slush moldings and vinyl calendering. It is also of special interest as a low-cost extender-type plasticizer in polystyrene casting resins, polystyrene adhesives, molding polyvinyl carbazole, strip coatings for metals, floor tile compositions, asphalt base paints.

Send for full information; ask for Bulletin No. P-104.

now available

AROCLORS

in ample supply

As a result of increased production capacity, the greater availability of Monsanto AROCLORS® is welcome news to processors in many different fields who have long depended on the unique properties of these chlorinated biphenyl—chlorinated phenyls.

The AROCLORS find prominent use in the electrical insulating field and in such widely differing applications as nonflammable hydraulic media, high-temperature and high-pressure lubricants, heat-transfer and expansion media, sealing compounds, adhesives and protective coatings, including plastics, pigments, lacquers, paints and varnishes.

The AROCLORS are very efficient and very economical, both when used alone to accomplish results not attainable with other materials and when used as extenders to enhance the properties of other products.

GET AROCLOR BULLETINS

There are numerous bulletins on the many applications of Monsanto AROCLORS—General... Chlorinated Rubber... Pilotite... Incombustible Lubricants in High-Pressure Compressors... Indirect Heater for Unit Control Operations... Co-Plasticizers for Polyvinylchloride... Co-Plasticizer with DOP for Vinyl Organosols and Pastes.

Investigate the AROCLORS! Please send for bulletins that interest you.
