Mr. Elmer Wheeler, Assistant Director
Medical Department
Monsanto Chemical Company
800 North Lindbergh
St. Louis 66, Missouri

Dear Elmer:

On May 11, 1960 Freeland Chew and I visited your office to discuss various industrial hygiene matters, particularly the testing procedure for Pydraul AC at the Queeny Plant. While we both regretted that you were away from the office that day, we did have a good discussion with Jack Garrett.

At the present time there is nothing new on the sampling method. As soon as Bill LaRocque has solved this problem at our Hopkinton Laboratory, then Freeland Chew will come to St. Louis to take the samples.

Jack provided some information on the decomposition of Pydraul A-200 which will enable Freeland to give a proper answer to another policyholder with a problem in this area. It should be added that this answer will in no way involve Monsanto's formulation of this product.

Cordially,

William H. Crawford
Supervising Engineer
