

Memo to: Dr. Kehoe
From: Dr. Zavon *Mr R3*
Date: December 19, 1962

At the recent meeting of the Threshold Limits Committee of the American Conference of Governmental Industrial Hygienists a number of materials presently on the list were assigned for reevaluation and a number of new materials were listed for which threshold limits were felt to be desirable. Among the materials listed were tetramethyl lead and tetraethyl lead.

I would appreciate very much any comment you might care to make regarding the threshold limit values for these two materials. Any references you might wish to refer me to would also be very much appreciated.
