W. Ruines	Secretary of A.I.A.	Johns-Manville Corporation
J. Callaghan	Retained by A.I.A.	Hill & Knowlton, Inc.,
		Public Relations Counsel

For the Institute:

E. Drislane	Executive Secretary	Friction Materials Standards Institute, Inc.
-------------	---------------------	---

Dr. Stefl, Chairman, called the meeting to order.

Dr. Stefl discussed the reasons for forming the Committee and the background for this first meeting. It was stated that because of the addition of asbestos as a target for environmentalists, and the fact that state and federal regulations are being proposed for asbestos control, that it was in the best interest for the various asbestos users to be current on proposed regulations. Further, this committee within the Friction Materials Standards Institute, Inc., could present the brake lining (and clutch facing) manufacturers' views to both the Asbestos Information Association of North America and to the various regulatory agencies. Another objective of this Committee would be to keep the members of the Institute informed as to the status of regulations concerning asbestos both in-plant and in the general environment, and to advise on the methods of measuring these asbestos concentrations in the environment.

ASBESTOS INFORMATION ASSOCIATION, N.A.

Dr. Stefl discussed the problems that have arisen for asbestos products and asbestos users, where perhaps the best example is local legislation where the spray coating of asbestos in construction has been banned. A group of eight companies in asbestos mining and processing joined to form the Asbestos Information Association of North America. There are now nine members.
