DATE: 1944

DOC#: OC420

DOCUMENT DESCRIPTION: Trade Journal - Sales Literature & Index of Advertisers

Every 49 seconds another bomb casing with tail end heated to 2100° F. leaves Tocco unit for spinning. Tocco heat-treating units made by The Ohio Crankshaft Company, Cleveland.

What keeps Tocco's insides clean?

IT'S A MACHINE to heat-treat steel by electrical induction.

Tocco units make better bomb cases [illegible] Heat airplane propeller ends to [illegible] F. in 115 seconds. Increase output of drill chucks 600 per cent. In addition to hundreds of manufacturers' faster production, lower costs and improved products.

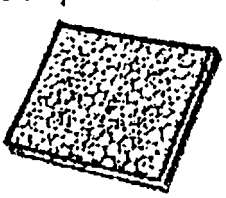

Tocco's insides consist of expensive, delicate machinery. A motor-generator is its heart. To assure proper operating temperature for the enclosed electrical equipment, air is fan-circulated throughout the cabinet. This air must obviously be clean as a whistle. Dust-Stop* Air Filters inside the intake louvres (see inset) make it that way.

Saves Possible Expense

Dust-Stops are one of the contributing factors to Tocco's remarkably low maintenance costs, made possible by careful design and engineering of the complete unit.

All users of machinery equipped with Dust-Stops have the advantages of a quick-change, standard size filter that can be easily removed when clogged with dirt accumulations and replaced with a new, clean Dust-Stop in a few minutes.

Tocco is but one interesting example of how Dust-Stops can be designed and engineered into machines where dust must be controlled. For further information on this type of application write: *Owens-Corning Fiberglas Corporation, 1912 Nicholas Building, Toledo 1, Ohio; Fiberglas Canada, Ltd., Oshawa, Ontario.*
